PRODUCTS & SERVICES 2022

CELEMICS

Innovative NGS-Based Products with Novel Sequencing Technology

Celemics Takes Customization to the Next Level

NGS industries are rapidly evolving and our customers are in greater need of technical support in various research fields and markets.
Just like a chameleon utilizing its colored pigments and crystals to adapt to its surroundings, we proactively pioneer and adapt to the everchanging NGS markets with our cutting-edge technology to support our customer's needs.
We are keenly focused on bringing the right solution to customers by elaborately customizing to individual customer's needs and goals.

CELEMICS

Celemics confidently offers customization services
and preset panels of the utmost quality

CONTENTS

CELEMICS' PRODUCTS & SERVICES

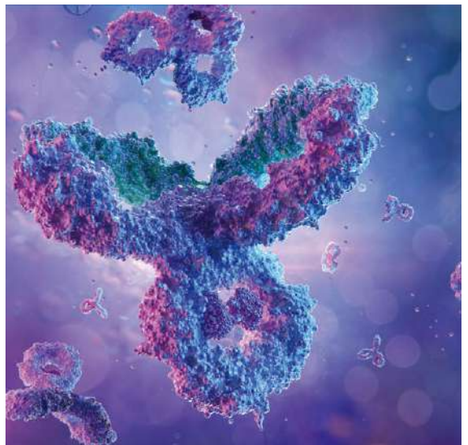
CELEMICS PRODUCTS & SERVICES OVERVIEW

CANCER RESEARCH

- Customized Targeted Sequencing
- BRCA 1/2 (Breast Cancer)
- OncoRisk
- CancerScreen / CancerMaster
- G-Mendeliome Clinical Exome Sequencing
- G-Mendeliome Disease Specific
- Customized RNA Sequencing
- Customized Methylation Sequencing
- Circulating Tumor DNA - Colorectal, Lung, Breast

MOLECULAR BREEDING (ANIMAL / PLANT RESEARCH)

- Customized High-Throughput Genotyping
- Africa Swine Fever Virus



ANTIBODY DISCOVERY

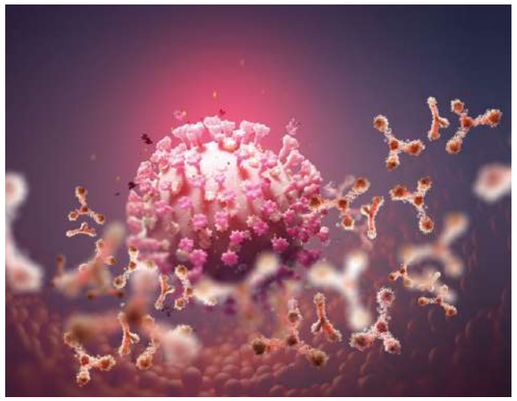
- TrueRepertoire™
- Immune Repertoire Profiling

DIAGNOSTICS & INHERITED DISEASES

- Customized Targeted Sequencing
- G-Mendeliome Clinical Exome Sequencing
- G-Mendeliome Disease Specific
- Cancer Panels (Somatic, Germline, ctDNA)
- Customized RNA Sequencing
- Customized Methylation Sequencing
- PharmacoScreen Panel
  : Standard / Epilepsy / Anti-tuberculosis

MICROBIOLOGY & VIRUS RESEARCHES

- Customized Targeted Sequencing
- Comprehensive Respiratory Virus
- Aftican Swine Fever Virus
- Customized 16S V4 NGS
- BTSeq™ – Standard
- BTSeq™ – Viral Analysis



SYNTHETIC BIOLOGY

- BTSeq™ Full Plasmid Sequencing
- BTSeq™ – Standard

TARGETED SEQUENCING SOLUTION

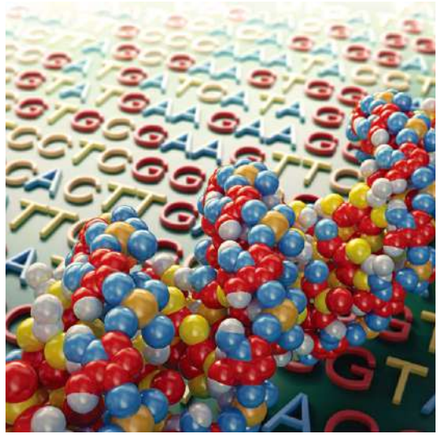
CELEMICS PRODUCTS & SERVICES 2022

CELEMICS

Targeted Sequencing Overview

Celemics has developed and delivered over 1,000 different customized panels. Our target enrichment method is capable of specifically isolating your genomic loci of interest out of the whole genome and increasing the sensitivity of detecting genetic mutations by producing higher coverage & in-depth sequencing data.

END-TO-END CUSTOMIZATION



PANEL DESIGN

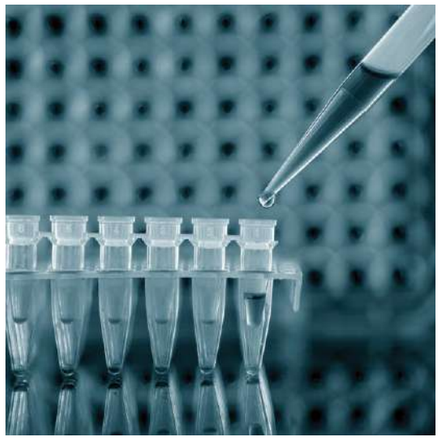
- Elaborately designed NGS panels comprised of your genes of interest
- Interactive discussion with customer prior to designing the panel (e.g., GC-rich, Homologous regions)
- Supported by advanced technology for probe design and reagent optimization
- Panel expansion possible through simple gene addition
- Alternative protocols in case required instruments are not available

SUPERIOR PERFORMANCE

- Market leading target enrichment kits
- Maximized cost-effectiveness
- Pre-capture pooling and high panel performance enables additional cost and labor savings

IN-HOUSE TEST & REBALANCING

- Adjustments to performance and functionality through thorough in-house validation test for every designed panel
- Detailed QC results encompassing wet-lab experiments, NGS run, and bioinformatics analysis provided to customer
- Rebalancing service possible through request
- Able to increase depth and coverage of a specific area if requested
- Finalize your order after reviewing QC results



DATA ANALYSIS

- Technical support available for customers new to NGS analysis
- Provides bioinformatics analysis services and tools from FASTQ to clinical report by request

OUTSTANDING PERFORMANCE OF TARGETED SEQUENCING

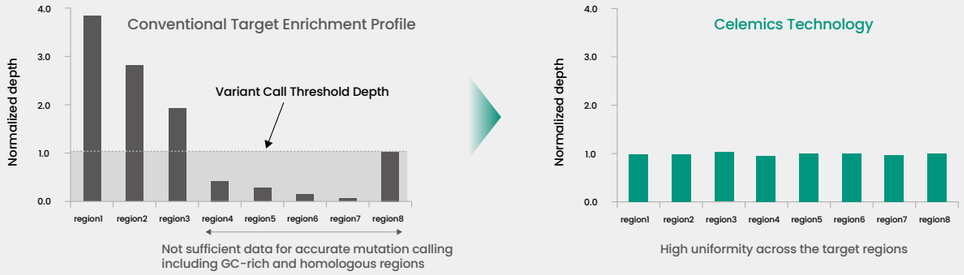
At Celemics, we support our customers through target hybridization-based NGS services and products individually designed and manufactured by experienced researchers and technicians. We have established a robust system for customized design panels and developed a variety of kits according to our customer's needs. All Ready-to-Use kits are completely validated and provide the best performance in the market. Our research team has designed and manufactured over a thousand customized panels and promises to offer the best quality product and service to our customers.

Key Features

1. Exceptional panel performance achieved by hybridization-based target capture method	Overcome limitations of amplicon-based NGS analysis with thoroughly validated hybridization-based target capture method High uniformity and coverage achieved by Celemics proprietary probe design technology
2. Assess all types of mutations with high sensitivity and specificity	Superior analytical performance compared to competitor products in detecting SNV, InDel, CNV, and rearrangement in a single NGS run with maximized sensitivity and specificity and minimized NGS noise enabled by Celemics unique molecular barcode assay and robust bioinformatics pipeline
3. Robust performance of assessing DNA and RNA across various specimen quality	Compatible with poor-quality and low-amount specimens such as FFPE, solid tumor, liquid biopsy, etc.
4. Efficient capture of 'Hard-to-Capture' regions	Analyze the clinically significant mutations embedded in GC rich or homologous regions, which are frequently masked by competitors
5. Wide compatibility with NGS instruments and automation platforms	Compatible with all NGS Instruments from Illumina, Thermo Fisher Scientific, Pacific Bioscience, MGI, and Oxford Nanopore Provides enzymes for DNA fragmentation as a substitute for sonicators
6. Flexible panel content: number of reactions of your choice and Gene Add-on Service	Save costs by ordering the number of reactions required for your experiment Expand your panel with minimum cost, time, and effort by simply adding or combining panels and genes of your interest

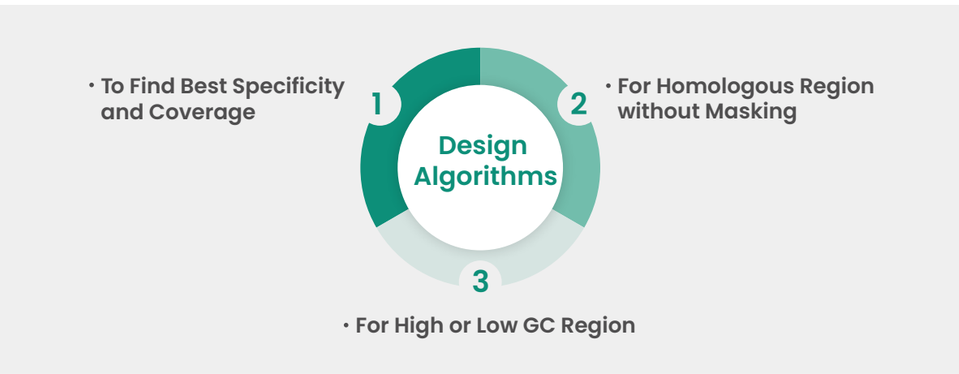
PROBE DESIGN TECHNOLOGY

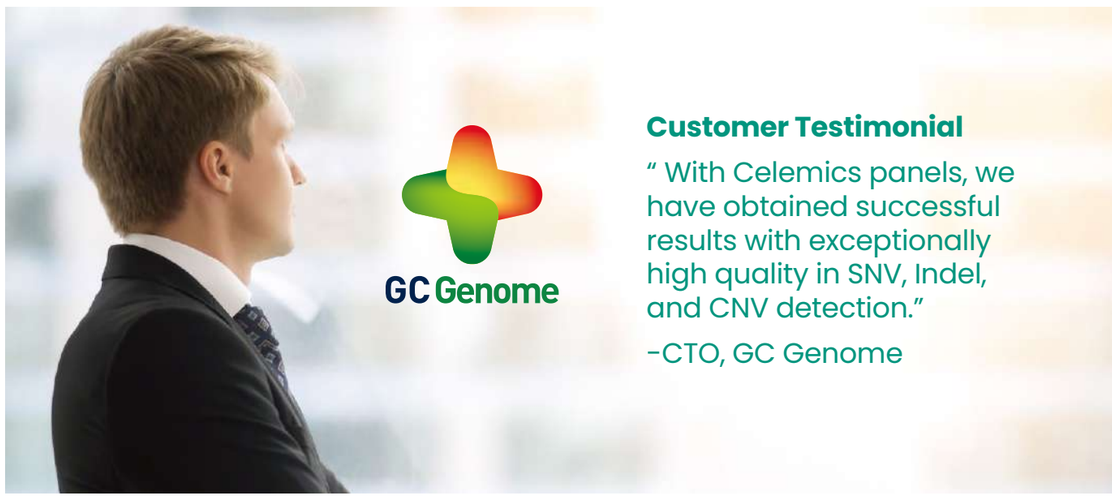
Market Problem and Celemics' Answer



Proprietary Probe Design Algorithm

Based on extensive wet-lab target capture experimentation for every customized panel



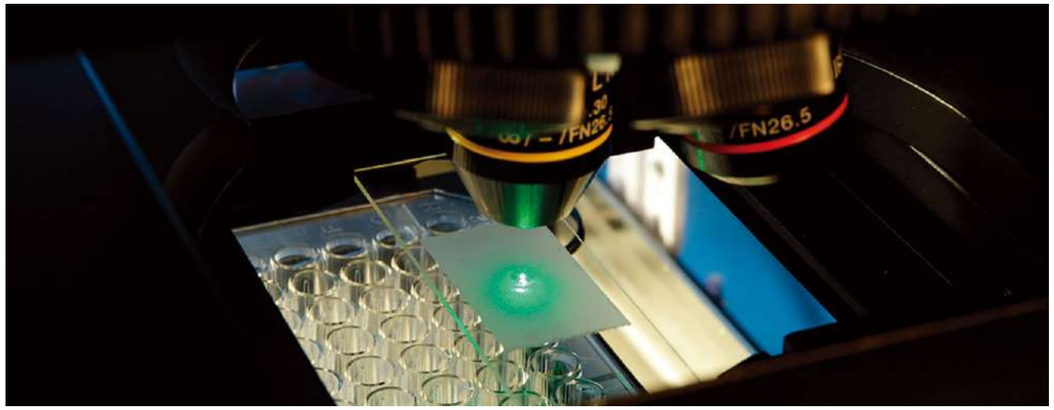


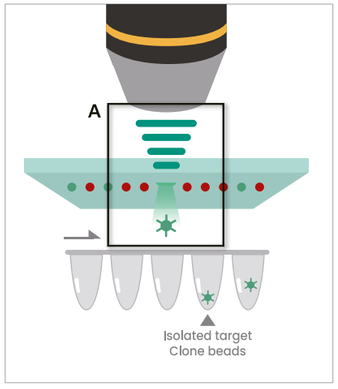
PROBE DESIGN TECHNOLOGY

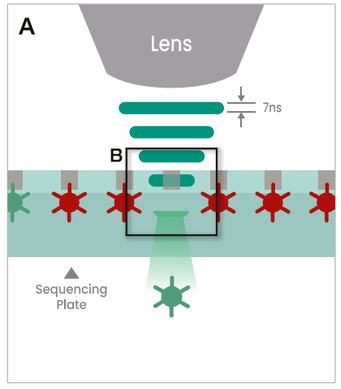
Proprietary Probe Manufacturing Technology

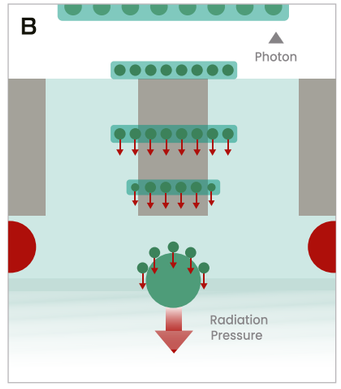
- Reduces complexity in handling complex oligo pools
- Enables extremely low-biased probe pool with handling individual probe sets
- Allows for cost-effectiveness and high-performance: advantage from pool-based probes and individually synthesized probes
- Achieves superior lot-to-lot uniformity for repeated orders due to proprietary 2-step probe synthesis technology

MSSIC Technology: Massively Separated and Sequence Identified Cloning

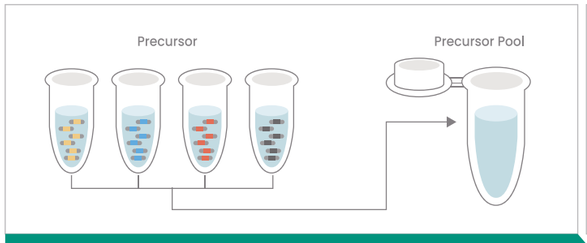




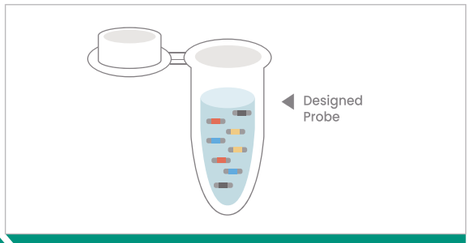




Two step probe manufacturing



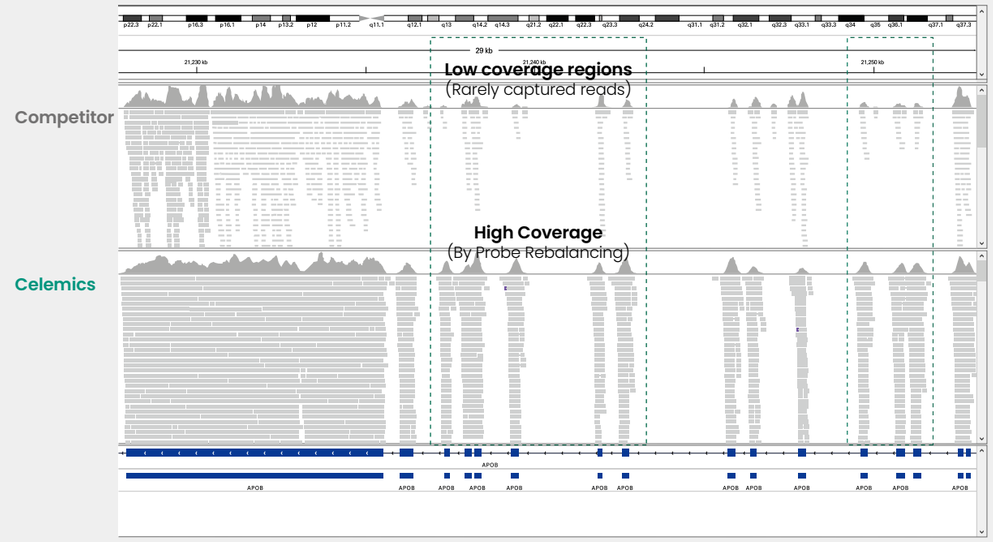
STEP 1. Manufacturing and Pooling of Precursor



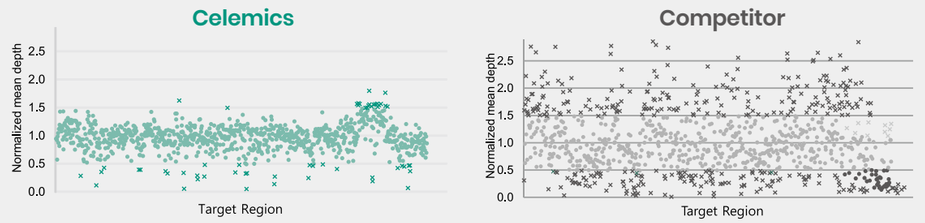
STEP 2. Optimized NGS Panel

TARGETED SEQUENCING PANEL PERFORMANCE

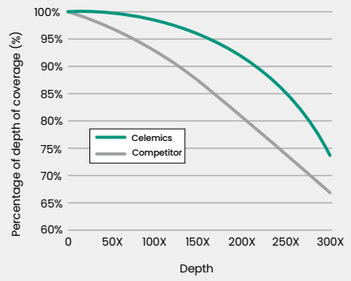
1. High Coverage Panel Compared to Competitor Products



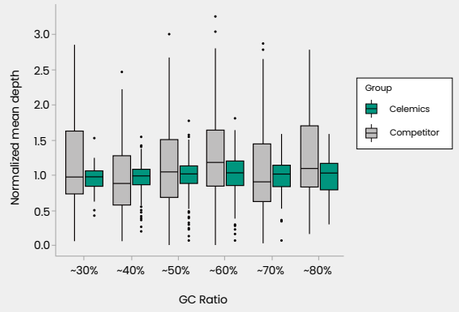
2. Higher Uniformity Across Target Regions



3. Superior Coverage Depth Over Target Regions



4. Superior Capture Performance Across GC Percentage

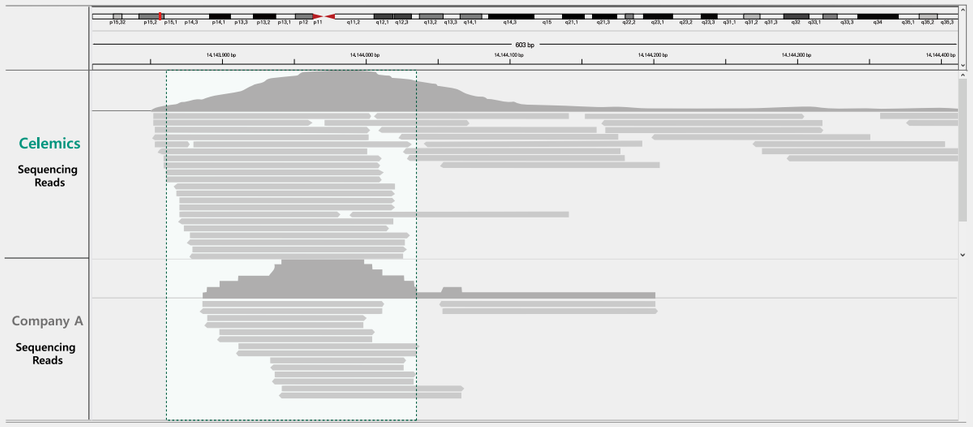


** Target region of both panels (BED file) are identical.
** Number of reads are the same for the results from both panels.

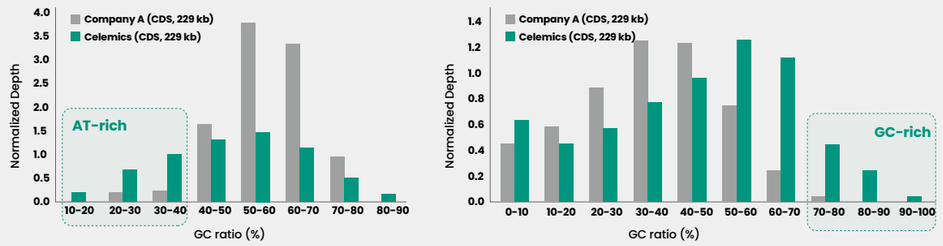
Targeted sequencing allows for sequencing with higher accuracy by specifically targeting the genomic regions of interest. The optimization process of the probes and reagents is essential for each of the different NGS platform types. Celemics has established the design technologies for the probes and reagents for various applications and achieved superior uniformity and depth of coverage compared to competitor products.

SEQUENCING PERFORMANCE OF CELEMICS PANEL FOR HARD-TO-CAPTURE REGIONS

1. Higher Depth compared to Company A Targeting Against the Same Target Area



2. Better Uniformity across AT- and GC-rich Regions

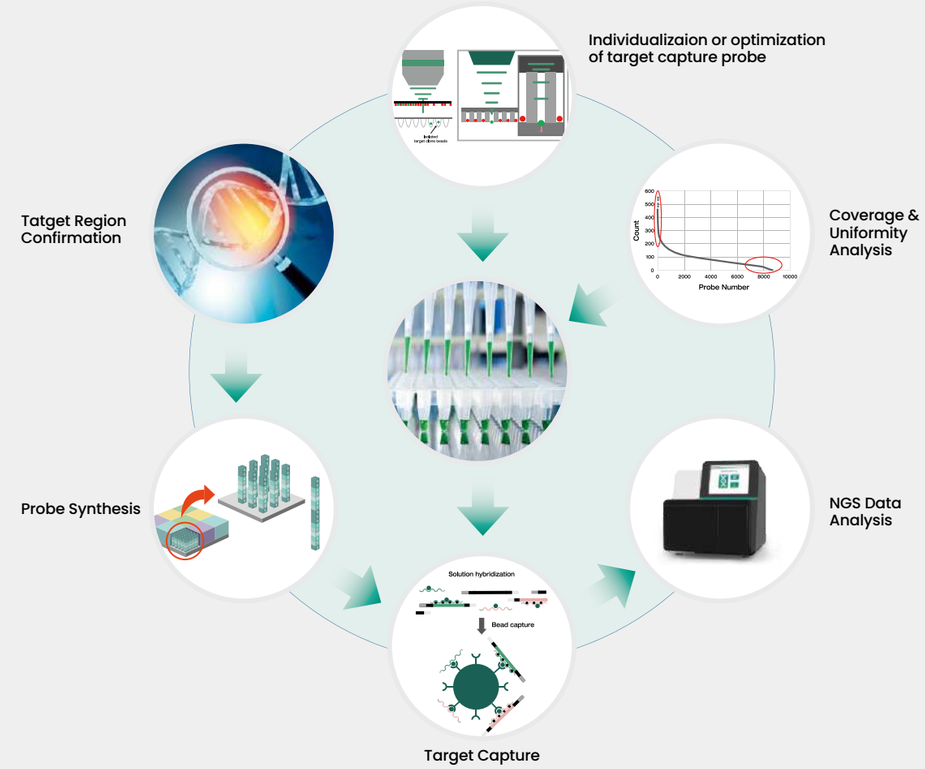


Even the most advanced NGS techniques have been challenged by GC-rich and homologous regions that are often masked or omitted by competitor services. Such a challenge is overcome by Celemics proprietary probe design technology which enables successful sequencing of GC-rich, AT-rich or homologous regions upon request. We also provide Homolog Report when the requested region includes homologous regions. Customers can then decide whether to include the regions in the order.

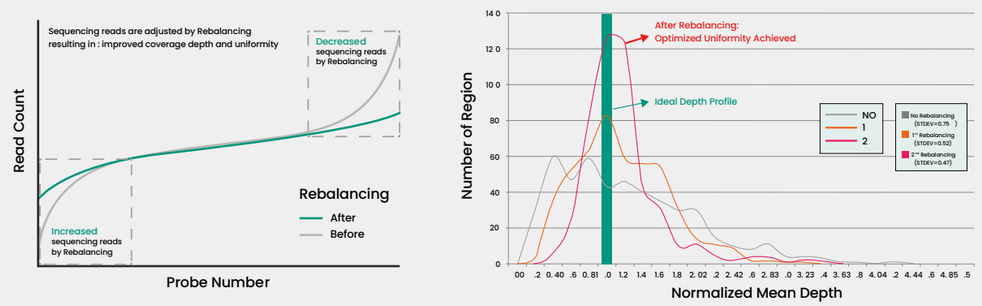
Our customers performed validation tests comparing Celemics' customized panels with our competitors'. For the competitor product, they performed validation tests based on competitor's recommended protocols for the same target regions. They also used the same sequencing amount for the fair experiment. As a result, customers selected our customized panels due to the high capture efficiency even with a lower amount of sequence data.

PILOT TEST & REBALANCING

Overview of Celemics Rebalancing Technology



Capture Uniformity Analysis



For customized targeted sequencing panels, we conduct in-house performance tests of requested panels and deliver the test results to customers. We also provide rebalancing services in case the customer requests for a specific area or overall performance improvement. The service includes redesigning probes against the requested regions and optimizing reagents to best meet our customers' needs.

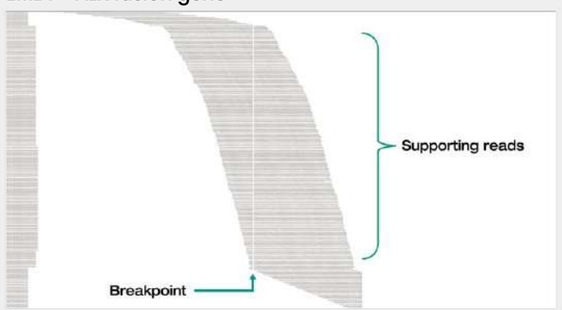
Accurate CNV and Gene Rearrangement Analysis with FFPE Samples Due to High Coverage Uniformity

	Panel A (400 kb)		Panel B (2.2 Mb)	
CNV	100 ng	50 ng	100 ng	50 ng
MET	Detected	Detected	Detected	Detected
MYCN	Not in 400 kb panel target region		Detected	Detected

EML4 - ALK fusion gene



We have conducted complete validation test for each Ready-to-Use panel and proved its superior performance compared to competitor products. The products are highly optimized for accurate and efficient assays even with poor quality and low-amount samples such as FFPE, ctDNA, etc. As shown in the table above, we have successfully performed CNV and rearrangement analysis from 50 ng of FFPE samples.

COST-EFFECTIVE SEQUENCING

Significantly reduced cost in Sample Prep, Target Enrichment Kit, and Sequencing

1. Sample Prep consumables developed and provided by Celemics for the highest optimization include CeleMag™ Clean-up Bead, CeleMag™ Streptavidin Bead, CLM Polymerase, and EP-kit (one-step workflow from Fragmentation to End-repair and A-tailing).
2. Pre-capture pooling reduces costs per sample.
3. Celemics has secured technology for proprietary probe design and manufacturing, significantly reducing costs of our Target Enrichment Kit.
4. Celemics panels have shown superior performance compared to competitor product in terms of uniformity and on-target ratio, enabling high-quality, cost-effective sequencing.

CELEMICS FEATURES & BENEFITS

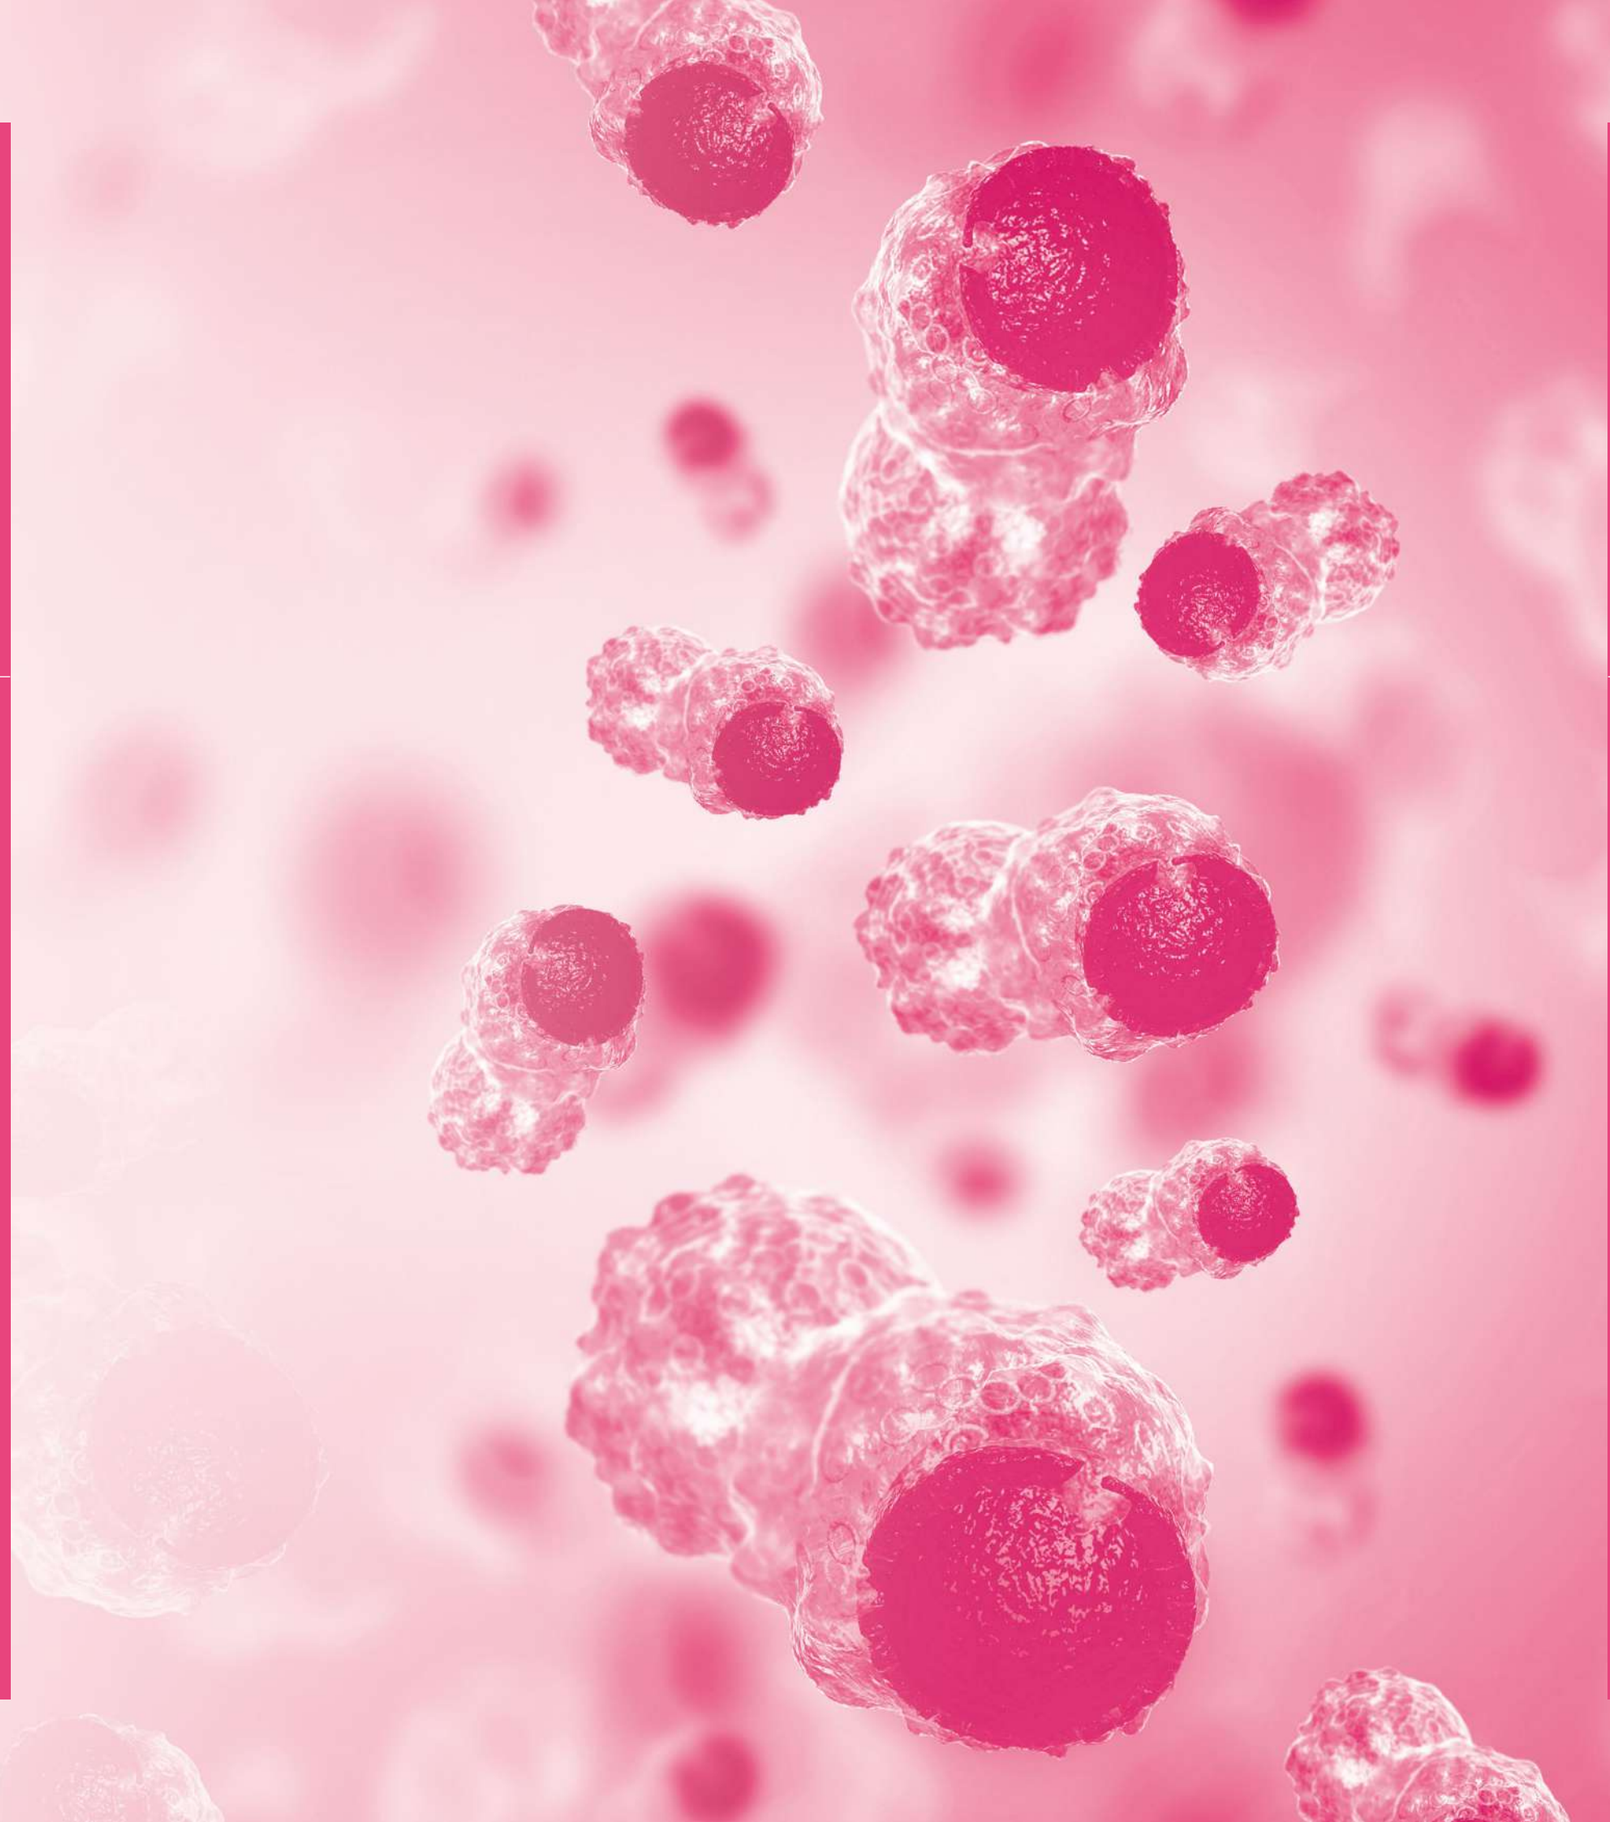
1. Hybridization-based capture	2. Maximized Efficiency allows Market Leading Capture Performance	3. Hybridization Enhancer Technology and Enzymatic Library Preparation
4. User-friendly Bioinformatics Software	5. Reduced NGS costs by Pre-capture pooling with no compromise on quality	6. Molecular barcode and bioinformatics for ultra-low VAF mutations
7. CAS for bioinformatics analysis	8. Flexible panel content with Gene Add-on Service	9. Default wet-lab QC for every customized panel
10. Minimal lot variation due to proprietary 2-step probe manufacturing technology	11. Compatible with all NGS instruments and automation platforms	12. Capture the 'Hard-to-Capture' regions
13. Optimization of species-specific blockers for maximum performance for agriculture and animal research	14. Improved Probe Design by Rebalancing Service only available in Celemics	15. Robust, Rapid, Reliable Customization

READY-TO-USE PANELS FOR ONCOLOGY

CELEMICS PRODUCTS & SERVICES 2022

BRCA 1/2 Panel
OncoRisk Panel
CancerScreen Panel - Core / 50 / 100 / 400
CancerMaster Panel

CELEMICS



BRCA 1/2 Panel

Germline and Somatic Cancer

KEY FEATURES

1. Targets the whole CDS (+/- 40) and promoter regions of BRCA 1/2 with high specificity	Target regions not only covering the CDS regions but expanded to +40 and -40 of CDS to detect splicing site variants Probes specifically designed for detecting deletion, duplication, and large rearrangement
2. Compatible with a variety of sample types	No compromise on panel performance even with of using DNA from challenging specimen types such as blood and FFPE
3. Market-leading panel performance in uniformity and coverage	Designed to target whole exon regions of BRCA 1, 2 gene with 100% coverage (RefSeq) and validated to yield 100% coverage

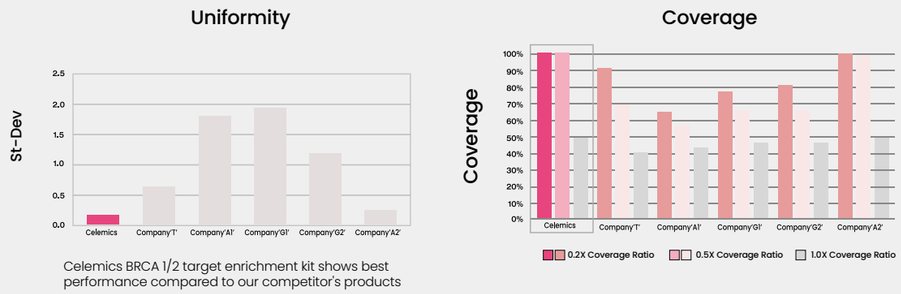
SPECIFICATION

Gene count*	BRCA 1/2 genes
Covered region	Whole CDS (+/- 40bp), UTR, Promoter
Target size	23 kb
Mutation type	SNV, Indel, CNV
Sample type(amount)	Blood (> 50 ng of fragmented DNA), FFPE
Platform	All sequencers from Illumina, Thermo Fisher, MGI, PacBio, and Oxford Nanopore
Sensitivity	> 95% for all variant types at 5% VAF
Specificity	99.9% (SNV), 99.5% (Indel)
Bioinformatics pipeline	Primary, Secondary and Tertiary analysis result (FASTQ to VCF, VCF to Clinical report)

* Gene Add-On Service: Genes can be added by customer's request

PANEL PERFORMANCE

1. Superior Panel Performance Compared to Competitor Product

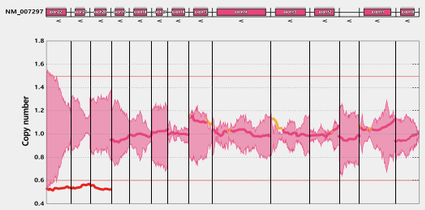


Celemics BRCA 1/2 target enrichment kit shows best performance compared to our competitor's products

2. SNV, CNV Analysis

BRCA1, S1556G & S1389S / BRCA2, N372H & L1521L / BRCA1 CNV plot

Gene	Mutation Type	Amino Acid Change	Sequencing			Variant Allele Frequency
			Total	Ref.	Alt.	
BRCA1	Non-SYN	p.S1556G	634	315	301	48.71%
BRCA1	SYN	p.S1389S	876	501	370	42.48%
BRCA2	Non-SYN	p.N372H	396	213	181	45.94%
BRCA2	SYN	p.L1521L	289	0	281	99.29%



PACKAGE COMPOSITION

Package name	Compositions		
Target Enrichment	Target capture Probe	-	
Standard	Target Enrichment reagents	Library prep Kit	-
All-In-One			Beads / Polymerase

Package option	Options	
Pooling method	Single Reaction	Pre-capture Pooling
Library Preparation kits	Standard Kit	EP-kit
Hybridization Enhancer	Included	Not included

OncoRisk Panel

Hereditary Cancer
(Germline Cancer Risk)

KEY FEATURES

1. Comprehensive analysis of oncogenes	Analyze 31 oncogenes associated with inherited cancer and precisely selected from contract research organizations and numerous research studies
2. Robust bioinformatics system for large deletion analysis	Receive bioinformatics results for large deletion analysis provided by Celemics proprietary bioinformatics analysis system
3. Used for Homologous Recombination Deficiency (HRD) testing	Provides information for HDR grade computation to aid precision medicine for tumor treatment

SPECIFICATION

Gene count*	31 genes
Covered region	Whole CDS
Target size	96 kb
Mutation type	SNV, Indel, CNV, Rearrangment
Sample type(amount)	Blood (> 50 ng of fragmented DNA), FFPE
Platform	All sequencers from Illumina, Thermo Fisher, MGI, PacBio, and Oxford Nanopore
Sensitivity	> 95% for all variant types at 5% VAF
Specificity	99.90% (SNV), 99.50% (Indel)
Bioinformatics pipeline	Primary, Secondary and Tertiary analysis result (FASTQ to VCF, VCF to Clinical report)

* Gene Add-On Service: Genes can be added by customer's request

Library Preparation kits	Standard Kit	EP-kit
Hybridization Enhancer	Included	Not included

CancerScreen Panel

Core/50/100/400

Somatic Cancer

KEY FEATURES

1. Optimized panel for solid cancer	Assess DNA, RNA, and the whole CDS regions (RefSeq) of up to 407 genes and rearrangement regions associated with solid cancer
2. High sensitivity and specificity	Detect low-frequency and rare variants with high sequencing depths Capture the GC rich and homologous regions with Celemics proprietary design technology
3. Cost-effective sequencing	Lower sequencing costs for 3 Gb sequencing amount compared to competitor product
4. Assess all variant types	Detect all mutation types including SNV, Indel, Large Indel, CNV, Rearrangement, MSI, and TMB in a single assay

SPECIFICATION

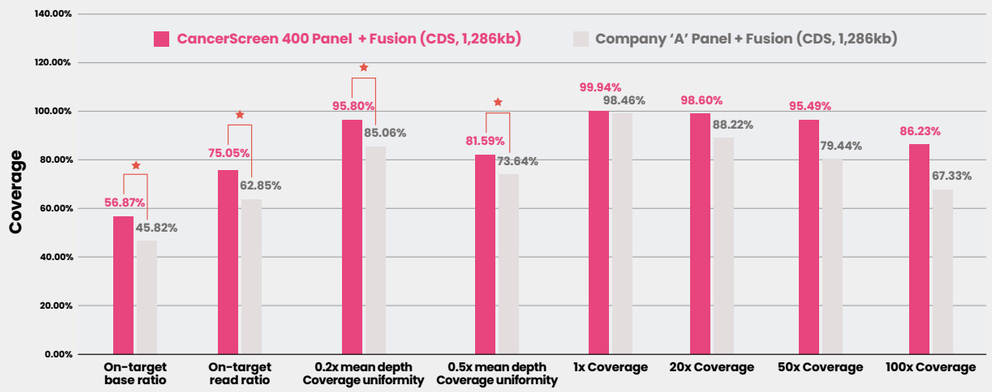
Gene count*	13 / 54 / 99 / 407 genes
Target size	61 / 197 / 299 / 1,123 kb + Rearrangement
Mutation type	SNV, Indel, CNV, Rearrangement, MSI, TMB
Sample type	FFPE, frozen tissue, cfDNA, RNA
Platform	All sequencers from Illumina, Thermo Fisher, MGI, PacBio, and Oxford Nanopore
Bioinformatics pipeline	Primary, Secondary and Tertiary analysis result (FASTQ to VCF, VCF to Clinical report)

* Gene Add-On Service: Genes can be added by customer's request

PANEL PERFORMANCE

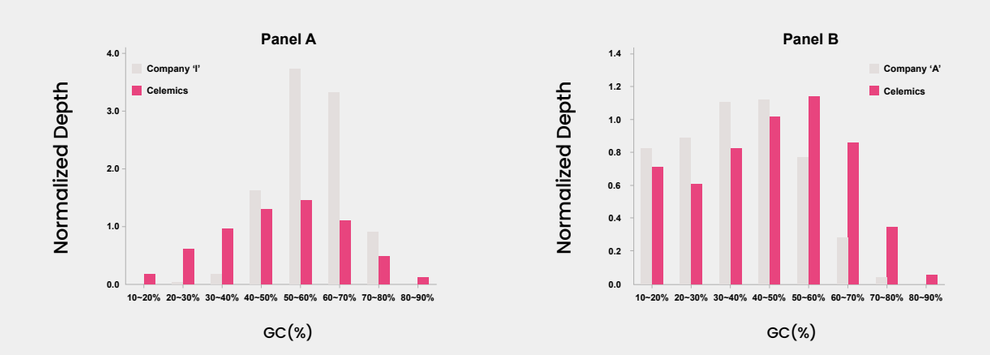
Performance Comparison with Competitor Product

Higher on-target ratio, uniformity, and coverage at 100X compared to competitor product over the target regions including exons and introns (Compared with the same sequencing depth)



Performance Comparison over GC-rich Regions

Higher uniform read depths over GC-rich regions compared to competitor product (Compared with the same sequencing depth)



PACKAGE COMPOSITION

Package option	Options	
Pooling method	Single Reaction	Pre-capture Pooling
Library Preparation kits	Standard Kit	EP-kit
Hybridization Enhancer	Included	Not included

CancerScreen Panel
Core

DESCRIPTION

The CancerScreen Core Panel is an NGS assay designed to detect all types of variants in 13 genes associated with somatic cancer. Targeting the selected genes with high sensitivity and specificity enables saving cost and effort. The report consists of the primary, secondary, and tertiary results for the In-depth understanding and interpretation of sequencing data.

GENE LIST

CancerScreen Core	**ALK**	APC	BRAF	EGFR	ERBB2	KRAS	MET	NRAS	PIK3CA	**RET**	**ROS1**	SMAD4	TP53

* Genes in bold indicate fusion analysis

CancerScreen Panel
50

DESCRIPTION

The CancerScreen 50 Panel is an expanded NGS assay designed to detect all types of variants in over 50 genes associated with somatic cancer. Targeting the selected genes with high sensitivity and specificity enables saving cost and effort. The report consists of the primary, secondary, and tertiary results for the In-depth understanding and interpretation of sequencing data.

CancerScreen Panel
100

DESCRIPTION

The CancerScreen 100 Panel is an NGS assay for the comprehensive analysis of around 100 genes associated with somatic cancer. All types of variants are detected with high sensitivity and specificity. The report consists of the primary, secondary, and tertiary results for the In-depth understanding and interpretation of sequencing data.

CancerMaster Panel

Somatic Cancer

DESCRIPTION

The CancerMaster Panel is designed to detect all variant types and immuno-oncology markers (MSI and TMB), which are crucial biomarkers for cancer immunotherapy. For CNV analysis, different cut-offs are applied according to the ratio of cancer cells. The panel is also designed to detect Epstein-Barr virus (EBV) and Human Papillomaviruses (HPV), allowing for the comprehensive analysis of cancer-associated genes.

KEY FEATURES

1. Comprehensive analysis of cancer-associated genes	A broad range of targeting elements including somatic variants, IO-signatures (TMB, MSI), EBV and HPV, for clinical diagnoses of different cancer types and applications to precision medicine
2. Extensive validation studies	Robust panel performance supported by extensive validation tests with reference and clinical specimens

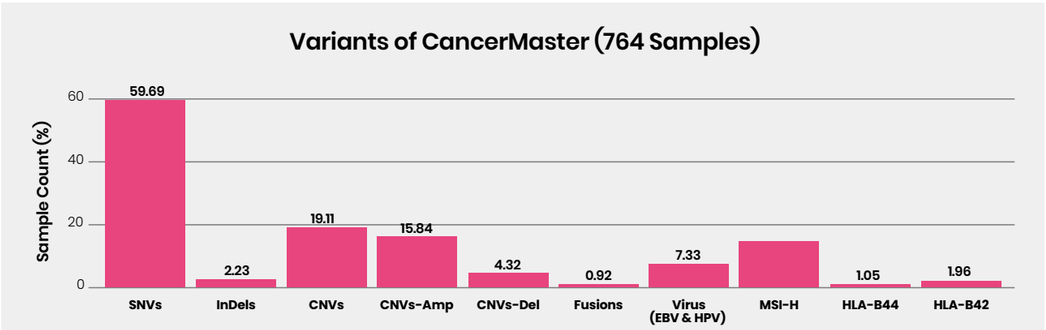
SPECIFICATION

Gene count*	524 genes
Covered region	Whole CDS, custom regions of oncogenes, immune response genes, and EBV & HPV viruses
Target size	2.5 Mb
Mutation type	SNV, Indel, CNV, Rearrangment, TMB, MSI, EBV, HPV
Sample type	FFPE, Fresh frozen tissue (> 50 ng of fragmented DNA)
Platform	All sequencers from Illumina, Thermo Fisher, MGI, PacBio, and Oxford Nanopore
Bioinformatics pipeline	Primary, Secondary and Tertiary analysis result (FASTQ to VCF, VCF to Clinical report)
Publication	Molecular Characterization of Biliary Tract Cancer Predicts Chemotherapy and PD-1/PD-L1 Blockade Responses, Hepatology, 2021

* Gene Add-On Service: Genes can be added by customer's request

PANEL PERFORMANCE

The probes are designed to include the intron regions as well as clinically significant biomarkers. By conducting extensive validation studies with clinical samples, the panel was examined to show its performance with high sensitivity and specificity in detecting the variants in cancer-associated genes.

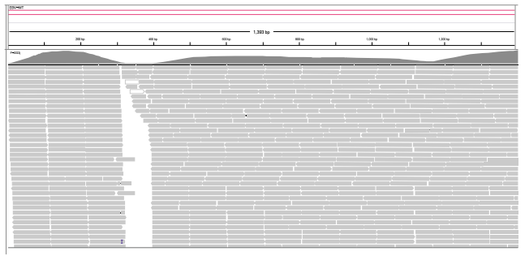


ANALYSIS OF EBV & HPV

EBV (Epstein-Barr Virus)

- Related disease – Lymphoma
- Genes – EBV type 1 (EBNA-2)

Validation for detection of EBV type 1 (EBNA-2) in control specimens



HPV (Human Papillomavirus)

- Related disease – Cervical cancer
- Genes – HPV L1 gene
  (Analysis of a total of 24 types is possible)

Analysis of the following 11 types of HPV types was completed using clinical specimens

Human infection HPV list
Human papillomavirus type 178
Human papillomavirus type 136
Human papillomavirus type 140
Human papillomavirus type 154
Human papillomavirus type 156
Human papillomavirus type 179
Human papillomavirus type 201
Human papillomavirus type 49
Human papillomavirus type 9
Human papillomavirus type 92
Human papillomavirus type 96

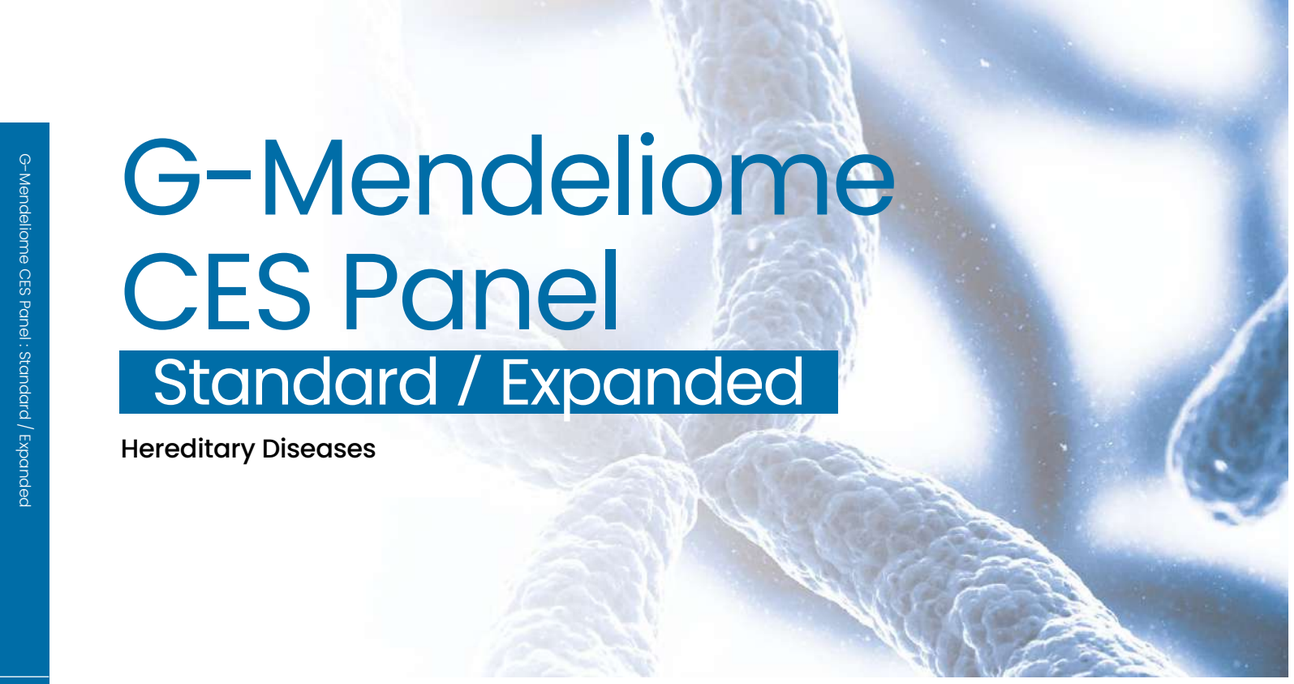
CELEMICS



G-Mendeliome CES Panel

Standard / Expanded

Hereditary Diseases

DESCRIPTION

The G-Mendeliome CES Panel has overcome the limitations of analyzing clinical diseases with whole exome sequencing. By selectively targeting the clinically significant genes, the panel enables comprehensive analysis with the most effective sequencing throughput.

KEY FEATURES

1. Comprehensive genomic profiling of a variety of genetic diseases	Includes 7,000 genes associated with clinically significant genetic diseases
2. A wide range of target regions	Includes all clinically significant regions that are not covered from competitor panels
3. Cost-effective analysis	Able to provide accurate analysis with reduced sequencing costs compared to WES

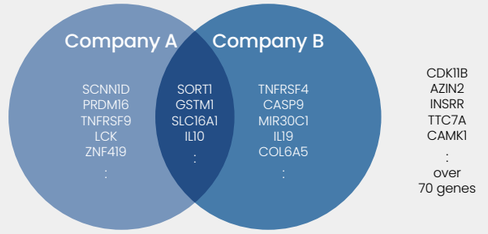
SPECIFICATION

Gene count*	5,516 / 7,563 genes
Covered region	CDS, hotspots, Mitochondrial genome
Target size	13.8 / 19.6 Mb
Mutation type	SNV, Indel, CNV
Sample type	Blood (> 50 ng of fragmented DNA)
Platform	All sequencers from Illumina, Thermo Fisher, MGI, PacBio, and Oxford Nanopore
Bioinformatics pipeline	Primary, Secondary and Tertiary analysis result (FASTQ to VCF, VCF to Clinical report)

PANEL PERFORMANCE

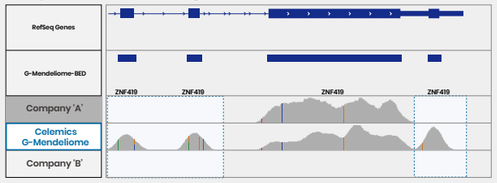
	Celemics	Company A	Company B
On-Target Read Ratio	82.8%	65.9%	80.8%

G-Mendeliome CES: Company A + Company B + over 70 genes



The CES panel was developed from the needs of GC Genome, the largest clinical NGS service provider in Korea, to solve the problem of poor diagnosis and high costs

Comparison data : ZNF419 gene



Comparison data: COL6A5 gene

G-Mendeliome Disease-Specific Panel

KEY FEATURES

1. Comprehensive analysis of a broad range of diseases	Identifying diseases associated with: Acute lymphatic leukemia, Acute Myeloid Leukemia, Cardiac disease, Coagulation, Epilepsy, Hearing loss, Inborn errors of metabolism, Lymphoma, Lysosomal storage disease, Common hereditary cancer for a medical checkup, Neuromuscular disease, Parkinson's disease, Alzheimer's disease, Dementia, Dystonia, RASopathies, Retinitis pigmentosa, Short stature, Skin disease, and Somatic cancer
2. Collaboration with the leading CRO in the country	Developed 17 different panels for assessing genes of related diseases

SPECIFICATION

Gene count*	Ranges from 61 to 321 genes
Covered regions	Whole CDS, hotspots
Target size	109-1,173 kb
Mutation type	SNV, Indel, CNV
Sample type	Differs by somatic or germline panel
Platform	All sequencers from Illumina, Thermo Fisher, MGI, PacBio, and Oxford Nanopore
Bioinformatics pipeline	Primary, Secondary and Tertiary analysis result (FASTQ to VCF, VCF to Clinical report)

* Gene Add-On Service: Genes can be added by customer's request

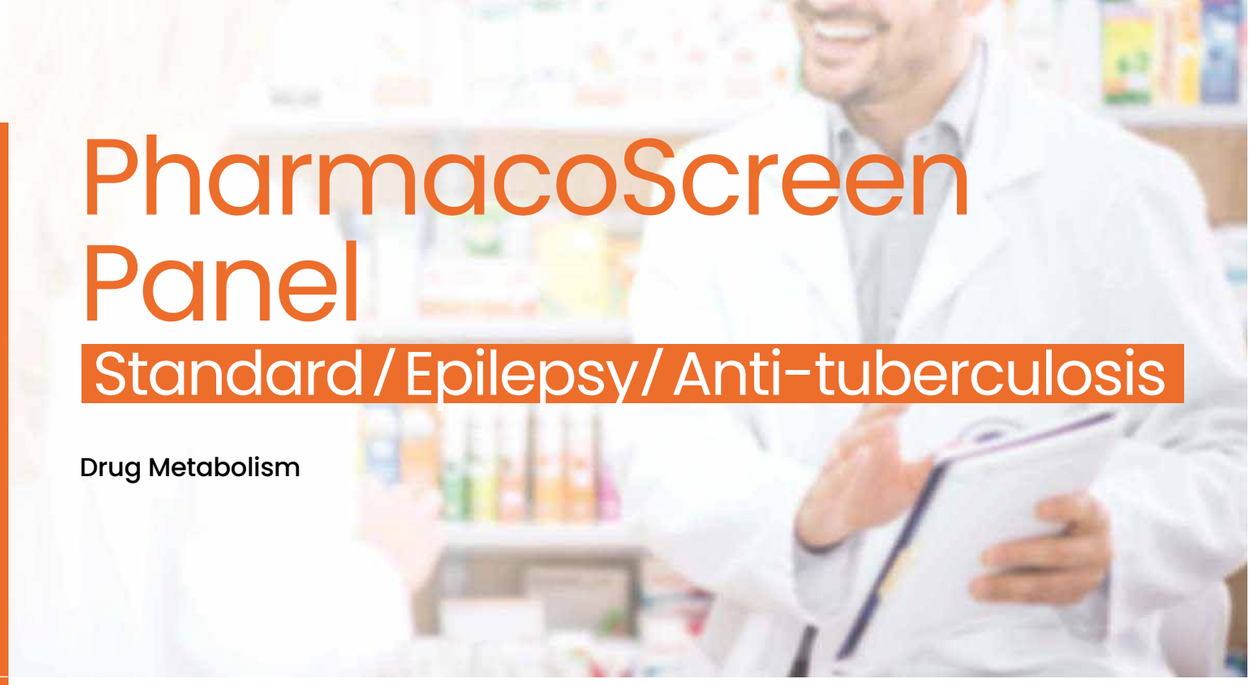
READY-TO-USE PANELS FOR PHARMACO-GENOMICS

CELEMICS PRODUCTS & SERVICES 2022

PharmacoScreen Panel

· Standard / Epilepsy / Anti-tuberculosis

CELEMICS



PharmacoScreen Panel

Standard / Epilepsy/ Anti-tuberculosis

Drug Metabolism

DESCRIPTION

The main target of PharmacoScreen Panel is the genes associated with prescribed drugs of the corresponding diseases. The assay allows for precise selection and dosage of prescribed drugs, and detection of genetic variants associated with drug metabolism, epilepsy and anti-tuberculosis.

KEY FEATURES

1. Assess extensive target regions associated with pharmacogenomics	Target over 120 genes associated with pharmacokinetics and pharmacodynamics
2. Validated panel performance	Collaborated with 4 major university hospitals on a government project Complete validation for clinical application
3. Flexible panel contents	PharmacoScreen Panels for drug metabolism, epilepsy, and anti-tuberculosis.

PANEL PERFORMANCE

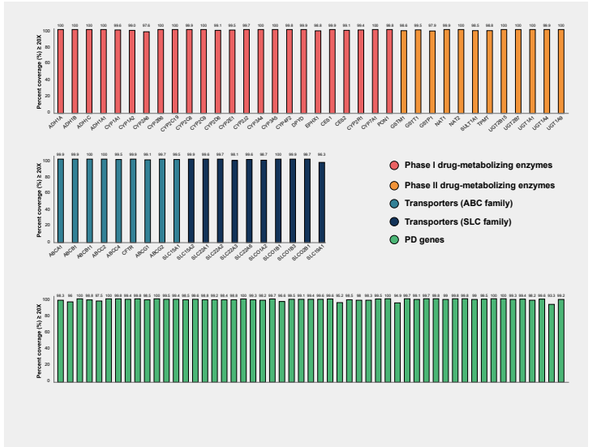
The panel performance test resulted in 99.9% specificity and 99.7% sensitivity.

1.1 Phase I/II drug-metabolizing enzyme (Drug metabolism)

1.2 ABC & SLC family transporter genes (Drug effect)

1.3 Pharmacodynamics genes (Drug biochemical and physiological)

1.4 Modifier genes (Drug ADME enhancement)



PACKAGE COMPOSITION

Package name	Compositions		
Target Enrichment	Target capture Probe	–	
Standard	Target Enrichment reagents	Library prep Kit	–
All-In-One			Beads / Polymerase

Package option	Options	
Pooling method	Single Reaction	Pre-capture Pooling
Library Preparation kits	Standard Kit	EP-kit
Hybridization Enhancer	Included	Not included

PharmacoScreen

Standard

DESCRIPTION

One of the major problems of organ transplantation is tissue damage by rejection and relapse of the disease after transplantation. Although applying immunosuppressive drugs can prevent rejection, determining the proper dosage of immunosuppressive drugs for an individual patient is challenging. The PharmacoScreen Standard Panel is an NGS assay, designed to assess 122 genes associated with pharmacogenomics ,including drug metabolism (Phase I, II), Transporters (ABC and SLC families), and Parkinson's disease-related genes (PD genes). The panel is not limited to 122 genes, and more genes of interest can be added through our Gene Add-on service.

SPECIFICATION

Gene count*	283 genes
Covered region	Whole CDS, UTR (-50 bp, +10 bp)
Target Size	634 kb
Mutation Type	SNV, Indel, CNV
Sample type (amount)	Blood (> 50 ng of fragmented DNA)
Platform	All sequencers from Illumina, Thermo Fisher, MGI, PacBio, and Oxford Nanopore
Sensitivity / Specificity	100% / 94.5%
Bioinformatics pipeline	Primary, Secondary and Tertiary analysis result (FASTQ to VCF, VCF to Clinical report)
Publications	Targeted Next-Generation Sequencing for Comprehensive Genetic Profiling of Pharmacogenes, Clinical Pharmacology & Therapeutics, 2016

* Gene Add-On Service: Genes can be added by customer's request

PharmacoScreen

Epilepsy

DESCRIPTION

The PharmacoScreen Epilepsy Panel, designed for research studies on epilepsy, consists of 91 genes associated with anti-epileptic drugs. Epilepsy is one of the most common neurological disorders, with its estimated prevalence is one out of 100 worldwide and constantly increasing. Epilepsy is usually treated by consistent application of anti-epileptic drugs. The aim of the treatment is to prevent seizures with no issues of side effects. Although over 20 different anti-epileptic drugs have been developed, most of the drugs failed to prevent seizures, or faced challenges of determining the proper dosage for an individual patient. The genetic factor is one of clinical factors to be considered.

SPECIFICATION

Gene count*	91 genes
Covered region	Whole CDS + UTR (-50 bp, +10 bp)
Target size	575 kb
Mutation type	SNV, Indel, CNV
Sample type (amount)	Blood (> 50 ng of fragmented DNA)
Platform	All sequencers from Illumina, Thermo Fisher, MGI, PacBio, and Oxford Nanopore
Bioinformatics pipeline	Primary, Secondary and Tertiary analysis result (FASTQ to VCF, VCF to Clinical report)

* Gene Add-On Service: Genes can be added by customer's request

PharmacoScreen

Anti-tuberculosis

DESCRIPTION

The PharmacoScreen Anti-tuberculosis Panel assesses genes associated with liver injury. Drug-induced liver injury (DILI), which is an important cause of acute liver failure, can be a threat to a patient and a common reason why some drug development projects are discontinued. According to a spontaneous reporting database from a research network of pharmacovigilance institutions in Korea, anti-tuberculosis drugs are reported to be the most common factor that leads to DILI demanding precise and personalized medicine.

SPECIFICATION

Gene count*	132 genes
Covered regions	Whole CDS + UTR (-50 bp, +10 bp)
Target size	186 kb
Mutation type	SNV, Indel, CNV
Sample type (amount)	Blood (> 50 ng of fragmented DNA)
Platform	All sequencers from Illumina, Thermo Fisher, MGI, PacBio, and Oxford Nanopore
Bioinformatics pipeline	Primary, Secondary and Tertiary analysis result (FASTQ to VCF, VCF to Clinical report)

* Gene Add-On Service: Genes can be added by customer's request

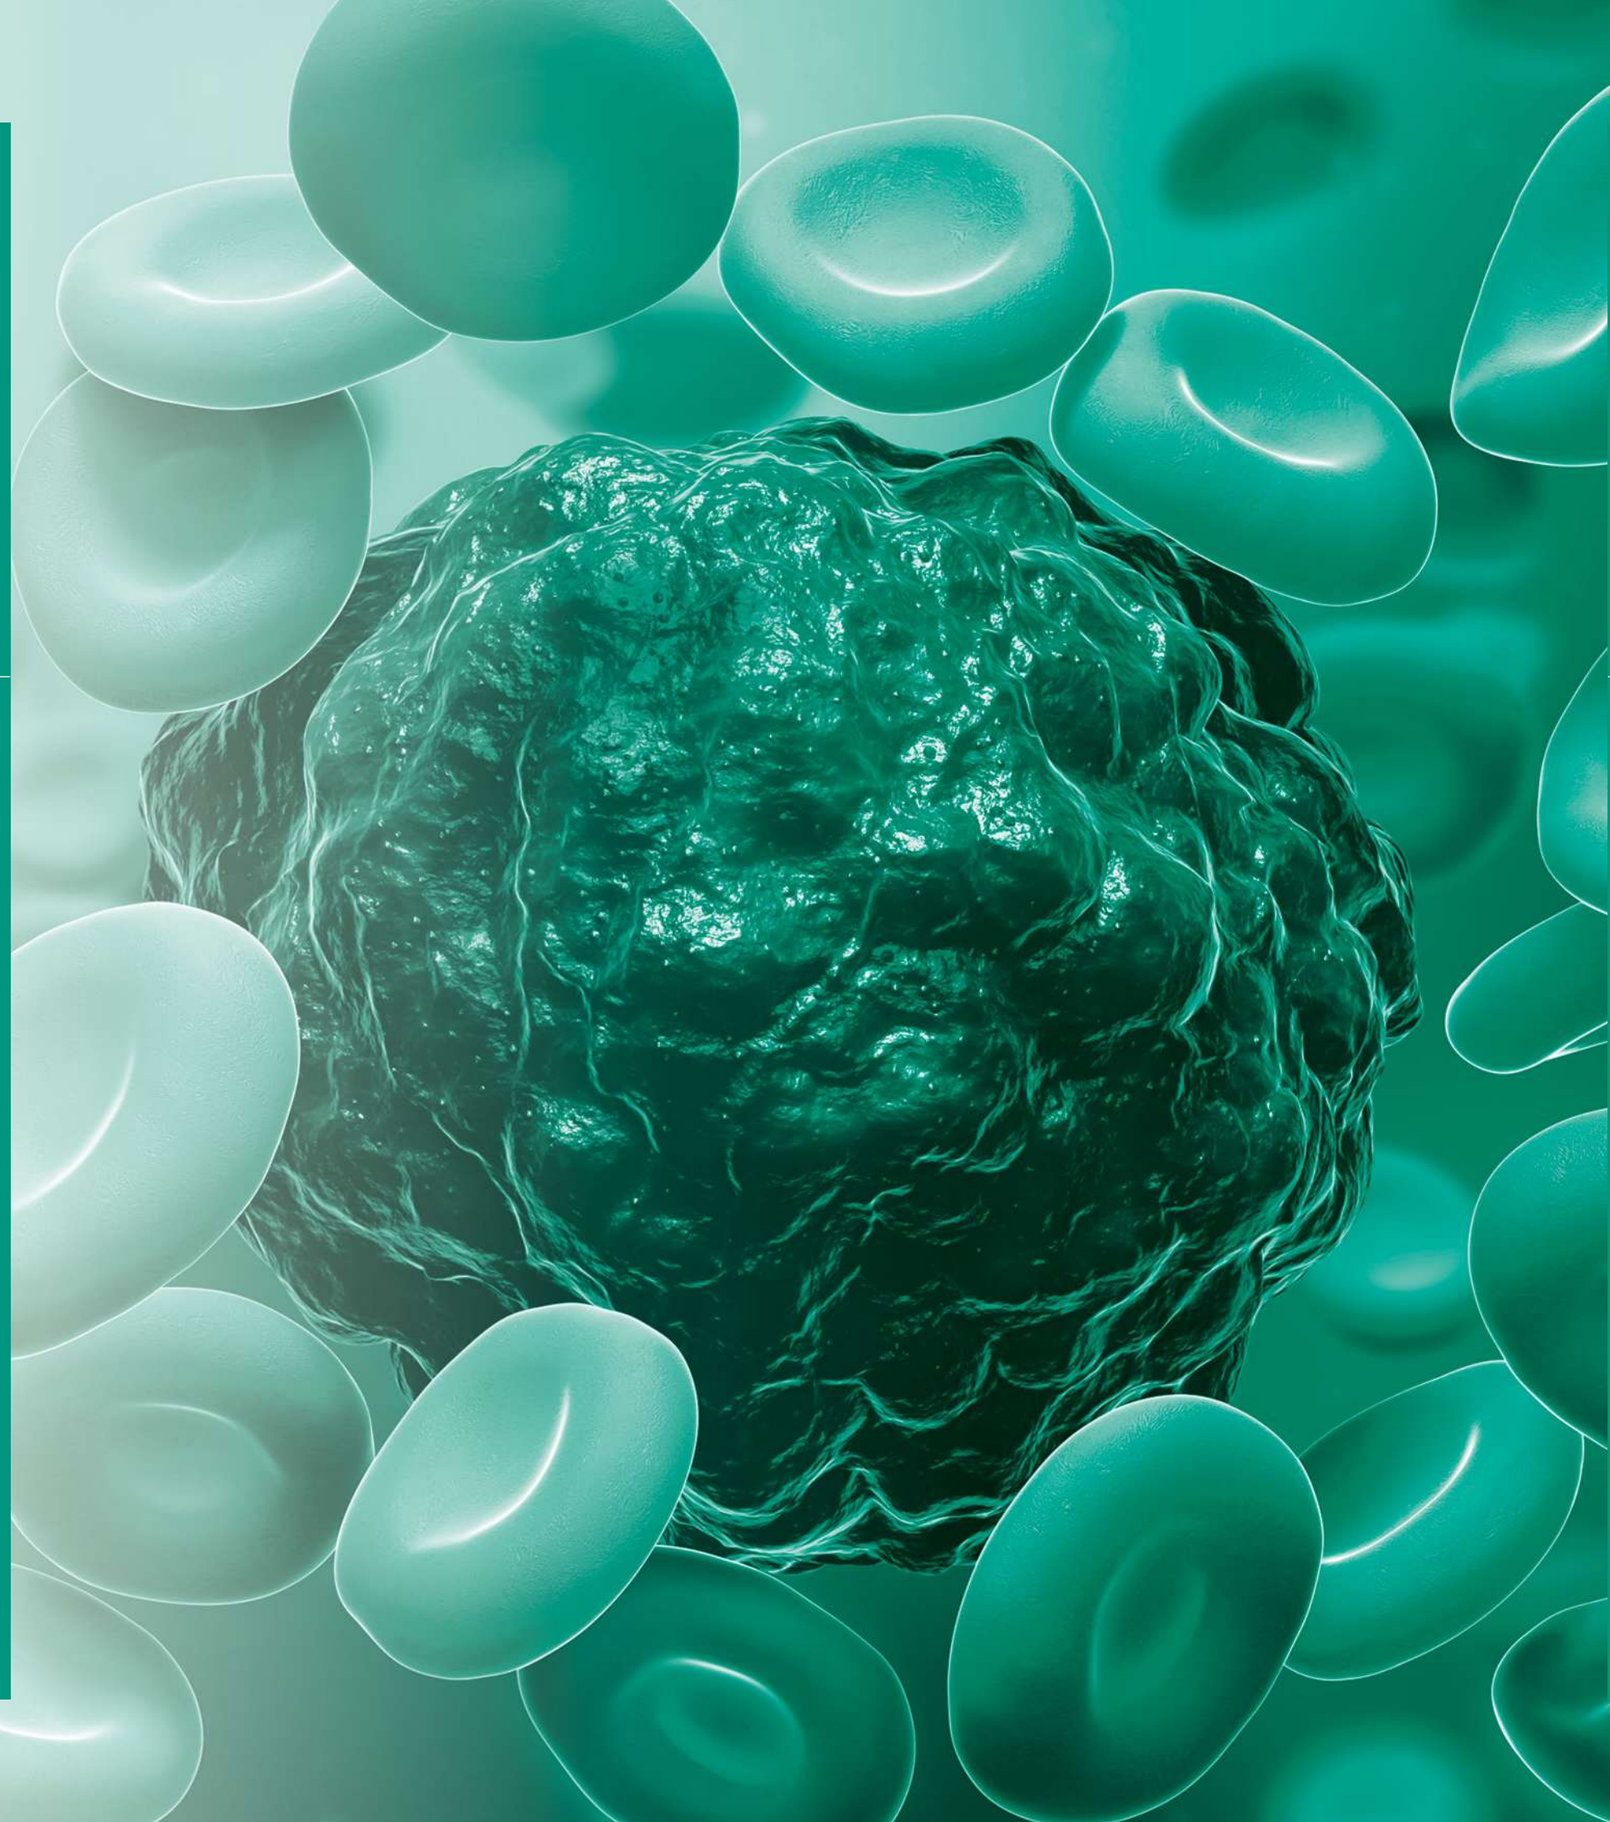
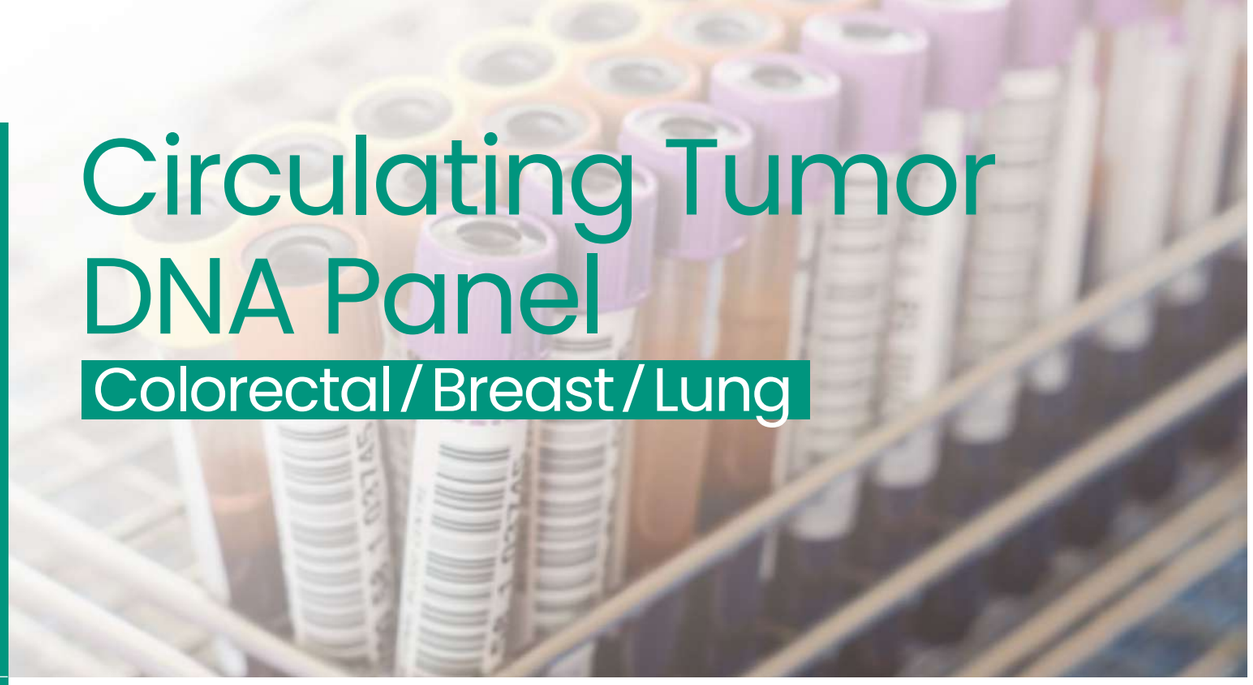
CELEMICS PRODUCTS & SERVICES 2022

Circulating Tumor DNA Panel
: Colorectal / Breast / Lung

CELEMICS





Circulating Tumor DNA Panel

Colorectal / Breast / Lung

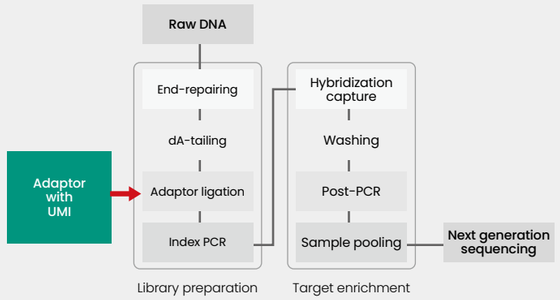
OVERVIEW

The detection sensitivity for low-frequency variants from a limited amount of sample is of great importance to ctDNA analysis kits. Celemics has developed ctDNA kits for colon, breast, and lung cancer assay through collaborative research with Seoul National University Hospital (SNUH) since 2017. We have integrated our market-leading proprietary technologies including probe design algorithms, noise removal techniques, and reagents optimization. The panels are thoroughly validated and ready to use for clinical diagnosis.

KEY FEATURES

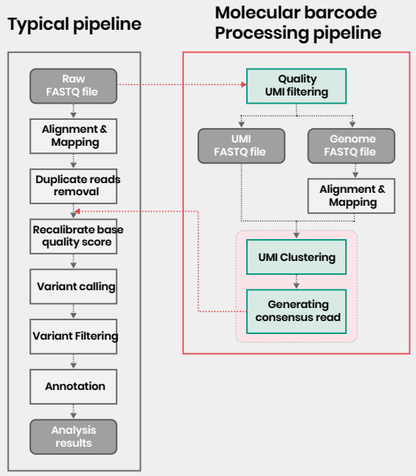
1. Detects ctDNA for colorectal cancer, breast cancer, and lung cancer	Assess 16 key genes for colorectal cancer, 27 for breast cancer, 28 for lung cancer
2. Highly optimized panel for clinical testing with exceptional accuracy	Complete validated panel performance conducted with patient samples through collaborative research with Seoul National University Hospital
3. Provides Unique Molecular Identifiers (UMI) and Bioinformatics Software	Receive high-quality data supported by Celemics proprietary UMI algorithms and analysis software, enabling efficient duplication removal and minimizing sequencing noise

MODULAR UNIQUE MOLECULAR IDENTIFIER



1. Able to assess ctDNA with ultra-low variant allele frequency (VAF)
2. Retrieves more unique reads than that from conventional duplication removal algorithm, reducing sequencing costs
3. Noise removal and accurate calls possible due to proprietary consensus sequence generation algorithm
4. Modular algorithm to be applied to the existing pipeline.

MODULAR BIOINFORMATICS PIPELINE



1. Molecular Barcode Analysis Program provided to the customers using Celemics ctDNA Panels. (Linux, CLI program)
2. Streamlined application of the Molecular Barcode Analysis Program to the standard pipeline.

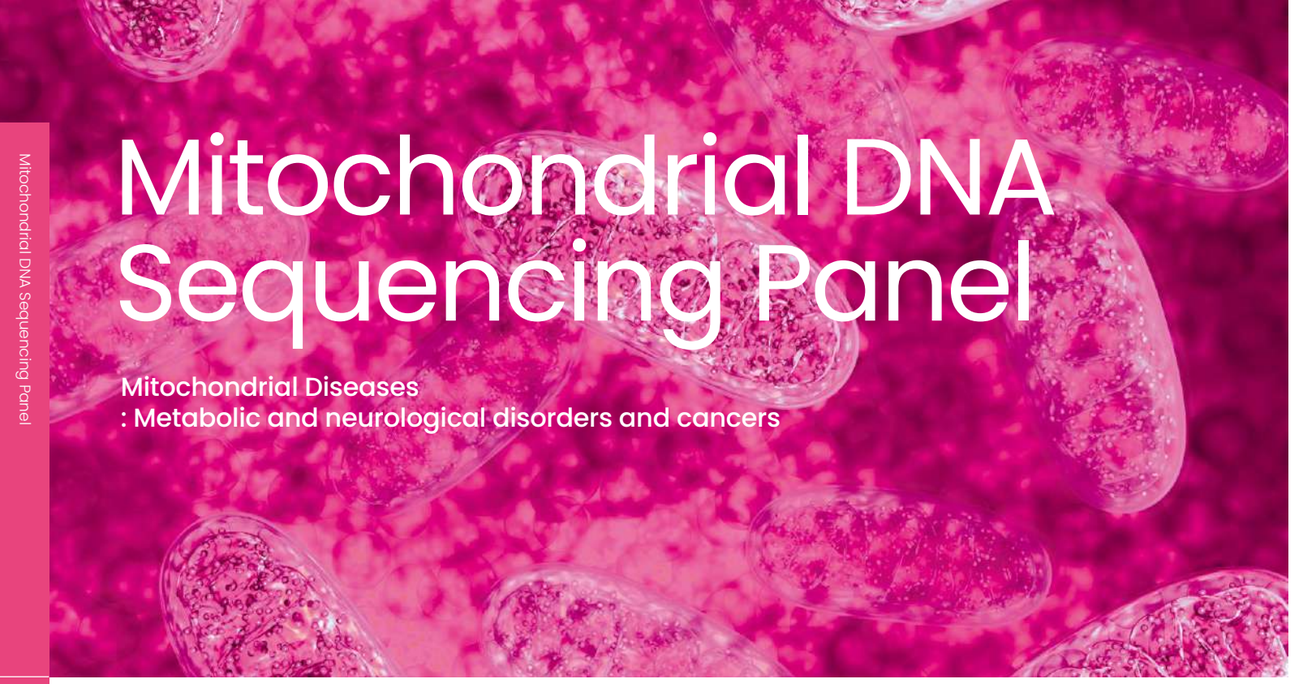
Specificity	100%

READY-TO-USE PANELS FOR MITOCHONDRIAL DNA

CELEMICS PRODUCTS & SERVICES 2022

Mitochondrial DNA Sequencing Panel

CELEMICS



Mitochondrial DNA Sequencing Panel

Mitochondrial Diseases
: Metabolic and neurological disorders and cancers

DESCRIPTION

Celemics has specifically designed capture probes and adjusted the concentration of the panel for each respective use with our own proprietary rebalancing technologies to provide complete, consistent coverage of the whole mitochondrial genome while taking into consideration small target regions. This enables the same high level of target capture efficiency regardless of small target sizes even with a stand-alone panel.

KEY FEATURES

1. High-fidelity sequencing	Guarantees maximum capture efficiency in custom panels without affecting target specificity
2. Highly uniform coverage and mean depth	High coverage and uniformity across the entire human mitochondrial genome
3. Flexible customization	Convenient addition to other Celemics target enrichment panels such as G-Mendeliome panels for further mtDNA-derived rare disease analysis

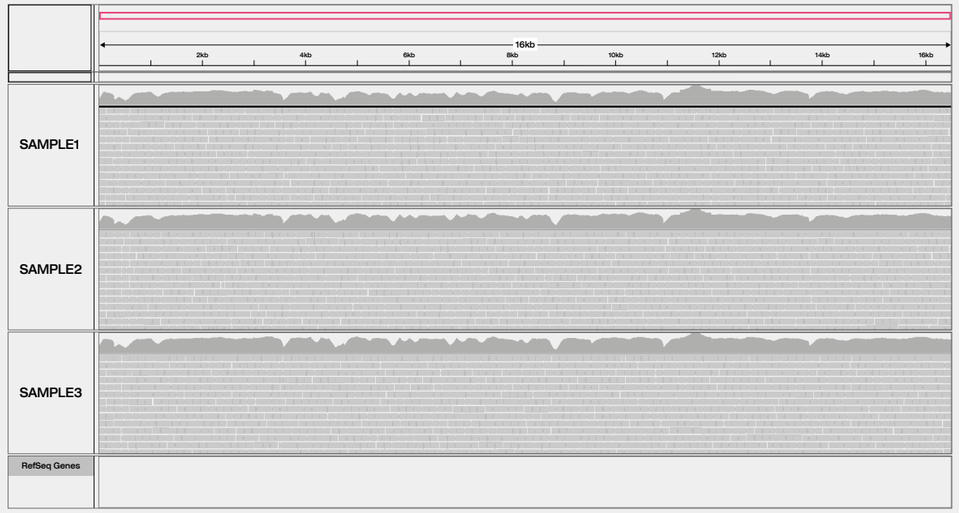
SPECIFICATION

Covered region*	Whole mitochondrial genome
Target size	16.6 kb
Mutation type	SNV, Indel
Sample type (amount)	Blood (> 50 ng of fragmented DNA)
Platform	All sequencers from Illumina, Thermo Fisher, MGI, PacBio, and Oxford Nanopore
Bioinformatics pipeline	Primary, Secondary and Tertiary analysis result (FASTQ to VCF, VCF to Clinical report)

PERFORMANCE

NGS Sequencing Amount	On-Target Base Ratio	Mean Depth	Coverage		
			10x	50x	100x
10Mb	97.93%	493x	99.98%	99.91%	99.87%

IGV EXAMPLE OF CELEMICS mtDNA SEQUENCING PANEL



Celemics mtDNA Sequencing Panel shows 99% coverage with uniformity

TARGET ENRICHMENT KITS FOR RNA SEQUENCING

CELEMICS PRODUCTS & SERVICES 2022

Targeted RNA Sequencing Panel

CELEMICS

Targeted RNA Sequencing Panel

Transcriptome Analysis

KEY FEATURES

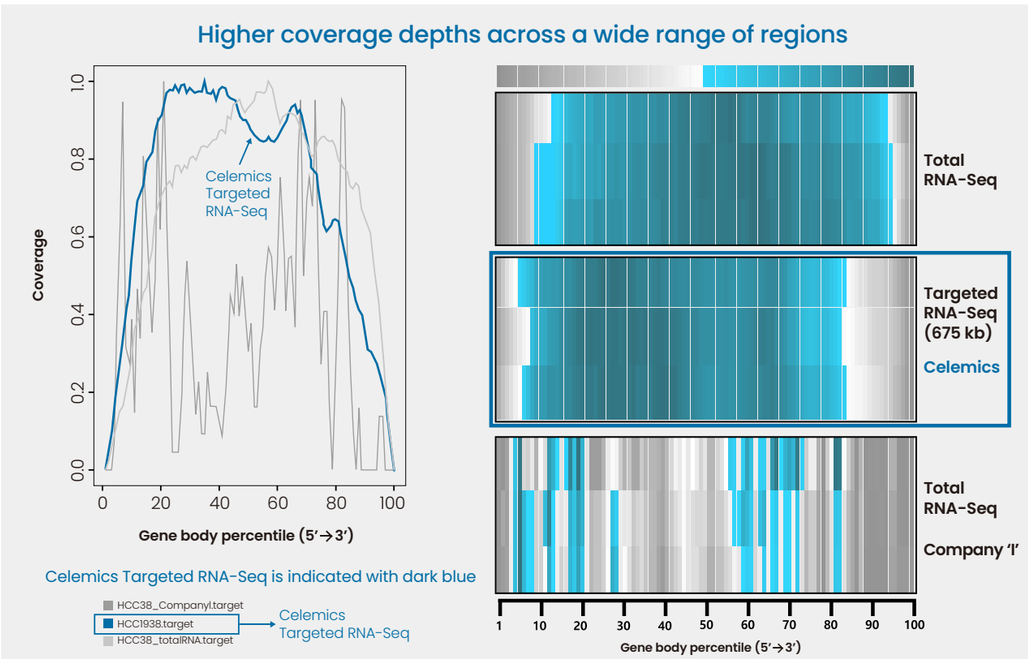
1. Cost-effective high-quality analysis	Accurate analysis of expression levels enabled by higher depth of coverage due to specific targeting of genes of interest, compared to total RNA sequencing
2. Compatible with a variety of sample types	Receive reliable results from poor-quality samples such as FFPE and low-amount samples such as cfRNA
3. Expression level in all regions of genes of interest	Covers all gene regions, allowing for the assessment of expression levels across all exons
4. Gene rearrangement analysis	Detects rearrangement and all other types of variants
5. Isoform analysis	Identify isoform expression levels by assessing the entire regions of targeted genes.

PACKAGE COMPOSITION

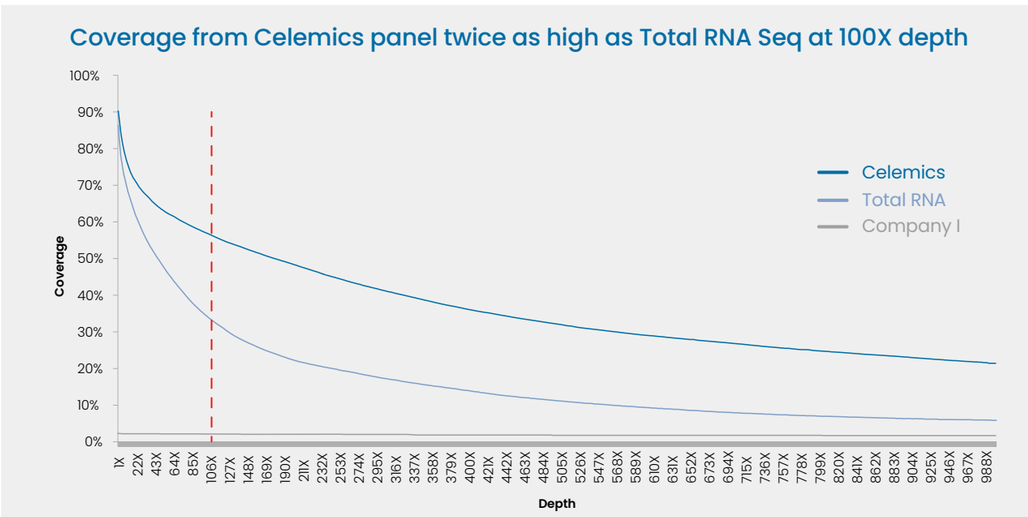
Package name	Compositions		
Target Enrichment	Target capture Probe	-	
Standard	Target Enrichment reagents	Library prep Kit	-
All-In-One			Beads / Polymerase

Package option	Options	
Pooling method	Single Reaction	Pre-capture Pooling
Library Preparation kits	Standard Kit	
Hybridization Enhancer	Included	Not included

PANEL PERFORMANCE



Celemics Targeted RNA Sequencing assesses the expression level of selective genes with sufficient level of coverage depth that is higher than that of total mRNA sequencing. Compared to competitor products that targets only parts of an exon, the Targeted RNA Sequencing developed by Celemics showed relatively higher coverage across a wide range of regions.



The comparison test between Celemics Targeted RNA Sequencing and total RNA sequencing shows that the coverage from the Celemics product is 15% higher at 50X and twice as high at 100X.

TARGET ENRICHMENT KITS FOR EPIGENETICS

CELEMICS PRODUCTS & SERVICES 2022

Targeted Methylation Sequencing Panel

CELEMICS

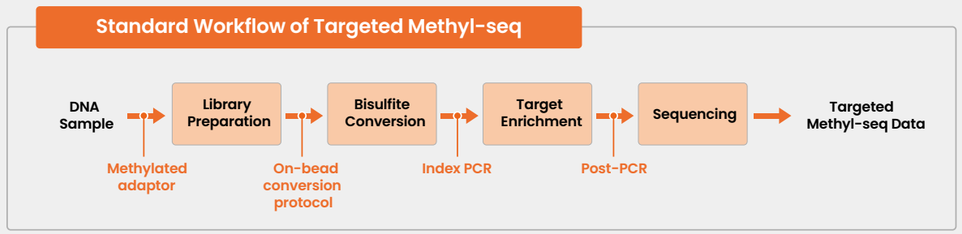
Targeted Methylation Sequencing Panel

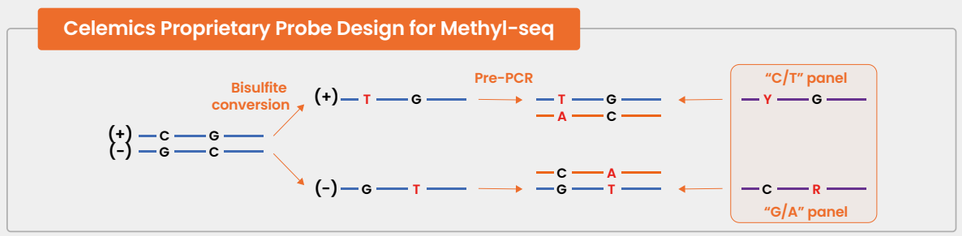
Epigenetics

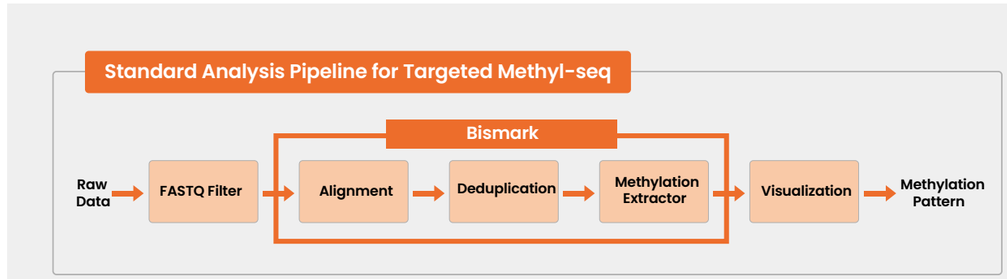
KEY FEATURES

1. Probe specifically designed for Methyl-seq	Elaborate design considering the sequence alteration by bisulfite conversion Thorough comparison analysis of the sequences before and after bisulfite conversion, enabling accurate detection of methylation sites
2. Compatible with all sample types	Perform methylation analysis with gDNA and cfDNA

PANEL PERFORMANCE

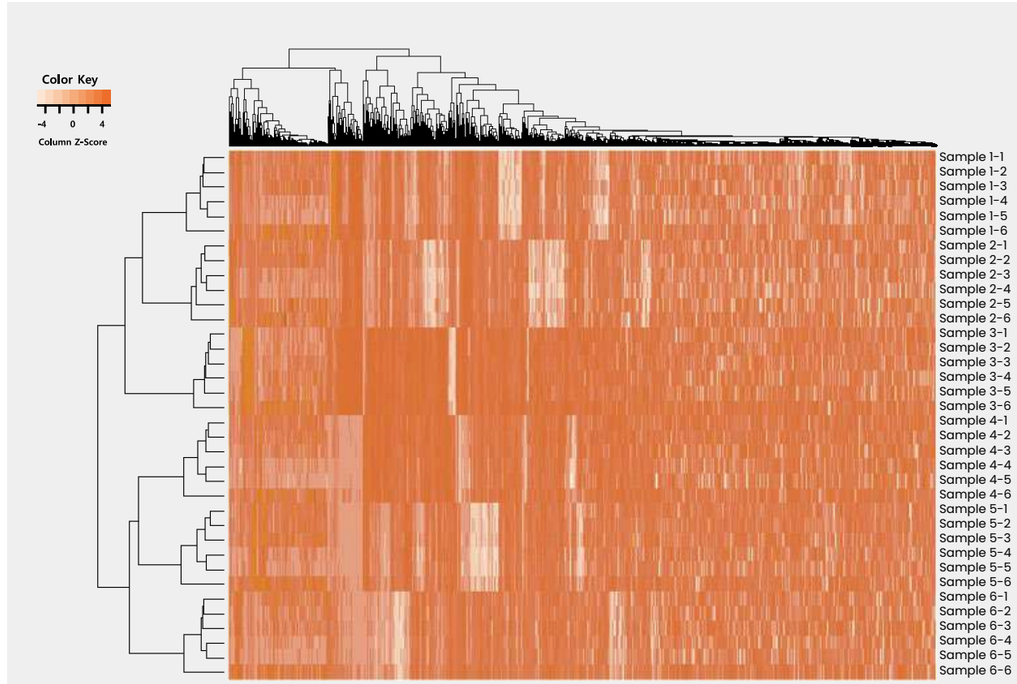






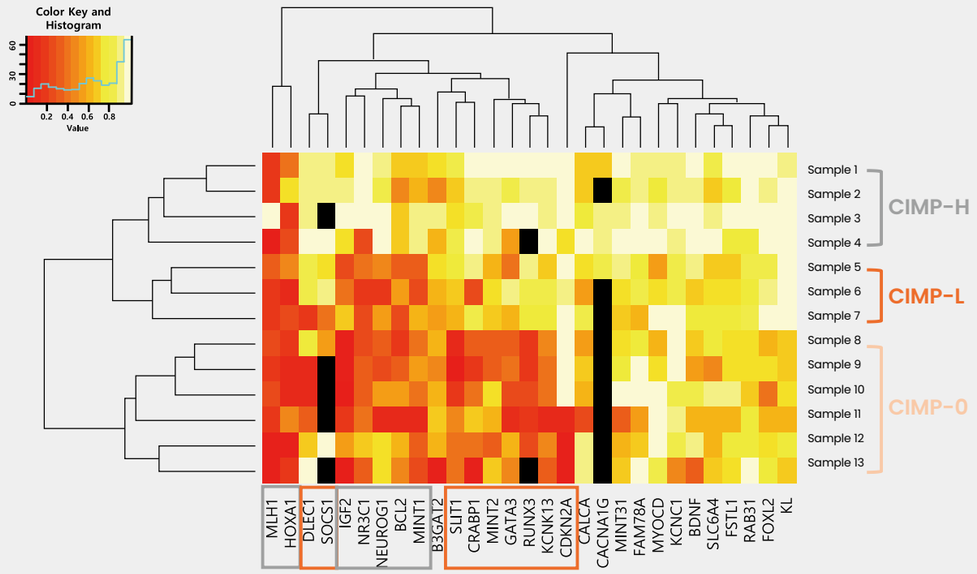
The Targeted Methylation Sequencing is proceeded with including a bisulfite conversion process in the NGS workflow.
The hybridization probe and methylated adapters are designed considering the sequence alteration by bisulfite conversion, enabling an accurate comparison analysis of the sequences before and after the conversion.
Selective genes are targeted for the analysis, allowing for cost-effective sequencing.

HIGH REPRODUCIBILITY OF METHYLATION PATTERN ANALYSIS



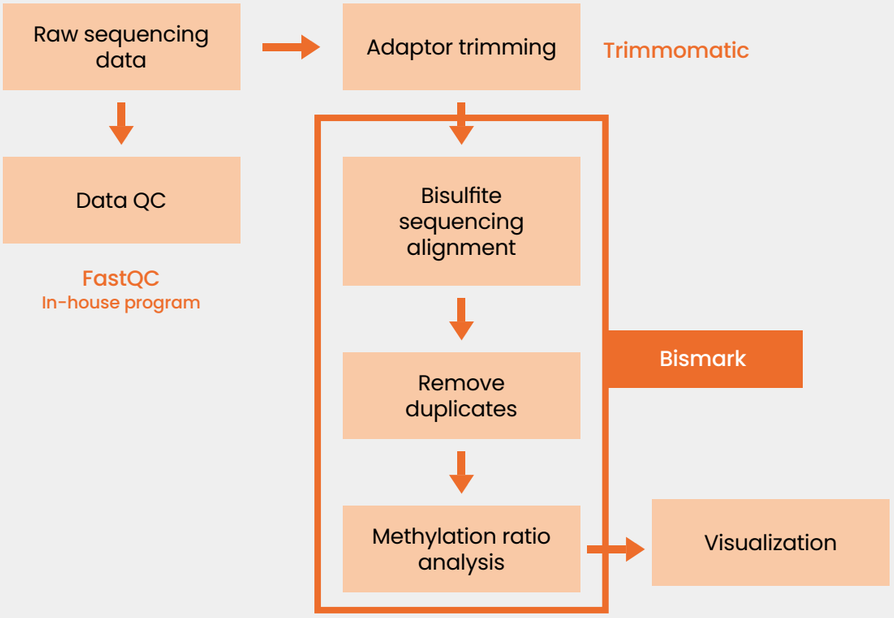
The results demonstrate high reproducibility of the analysis, yielding the same methylation patterns when repeatedly tested with the identical specimens.

HIGH CONCORDANCE OF METHYLATION PATTERN ANALYSIS WITH CLINICAL INFORMATION



The clustering result from pattern analysis showed high concordance with the clinical data information.

WORKFLOW OF TARGETED METHYLATION SEQUENCING ANALYSIS



Customers who are new to methylation analysis are supported by Celemics bioinformatics software service for fast and accurate analysis.

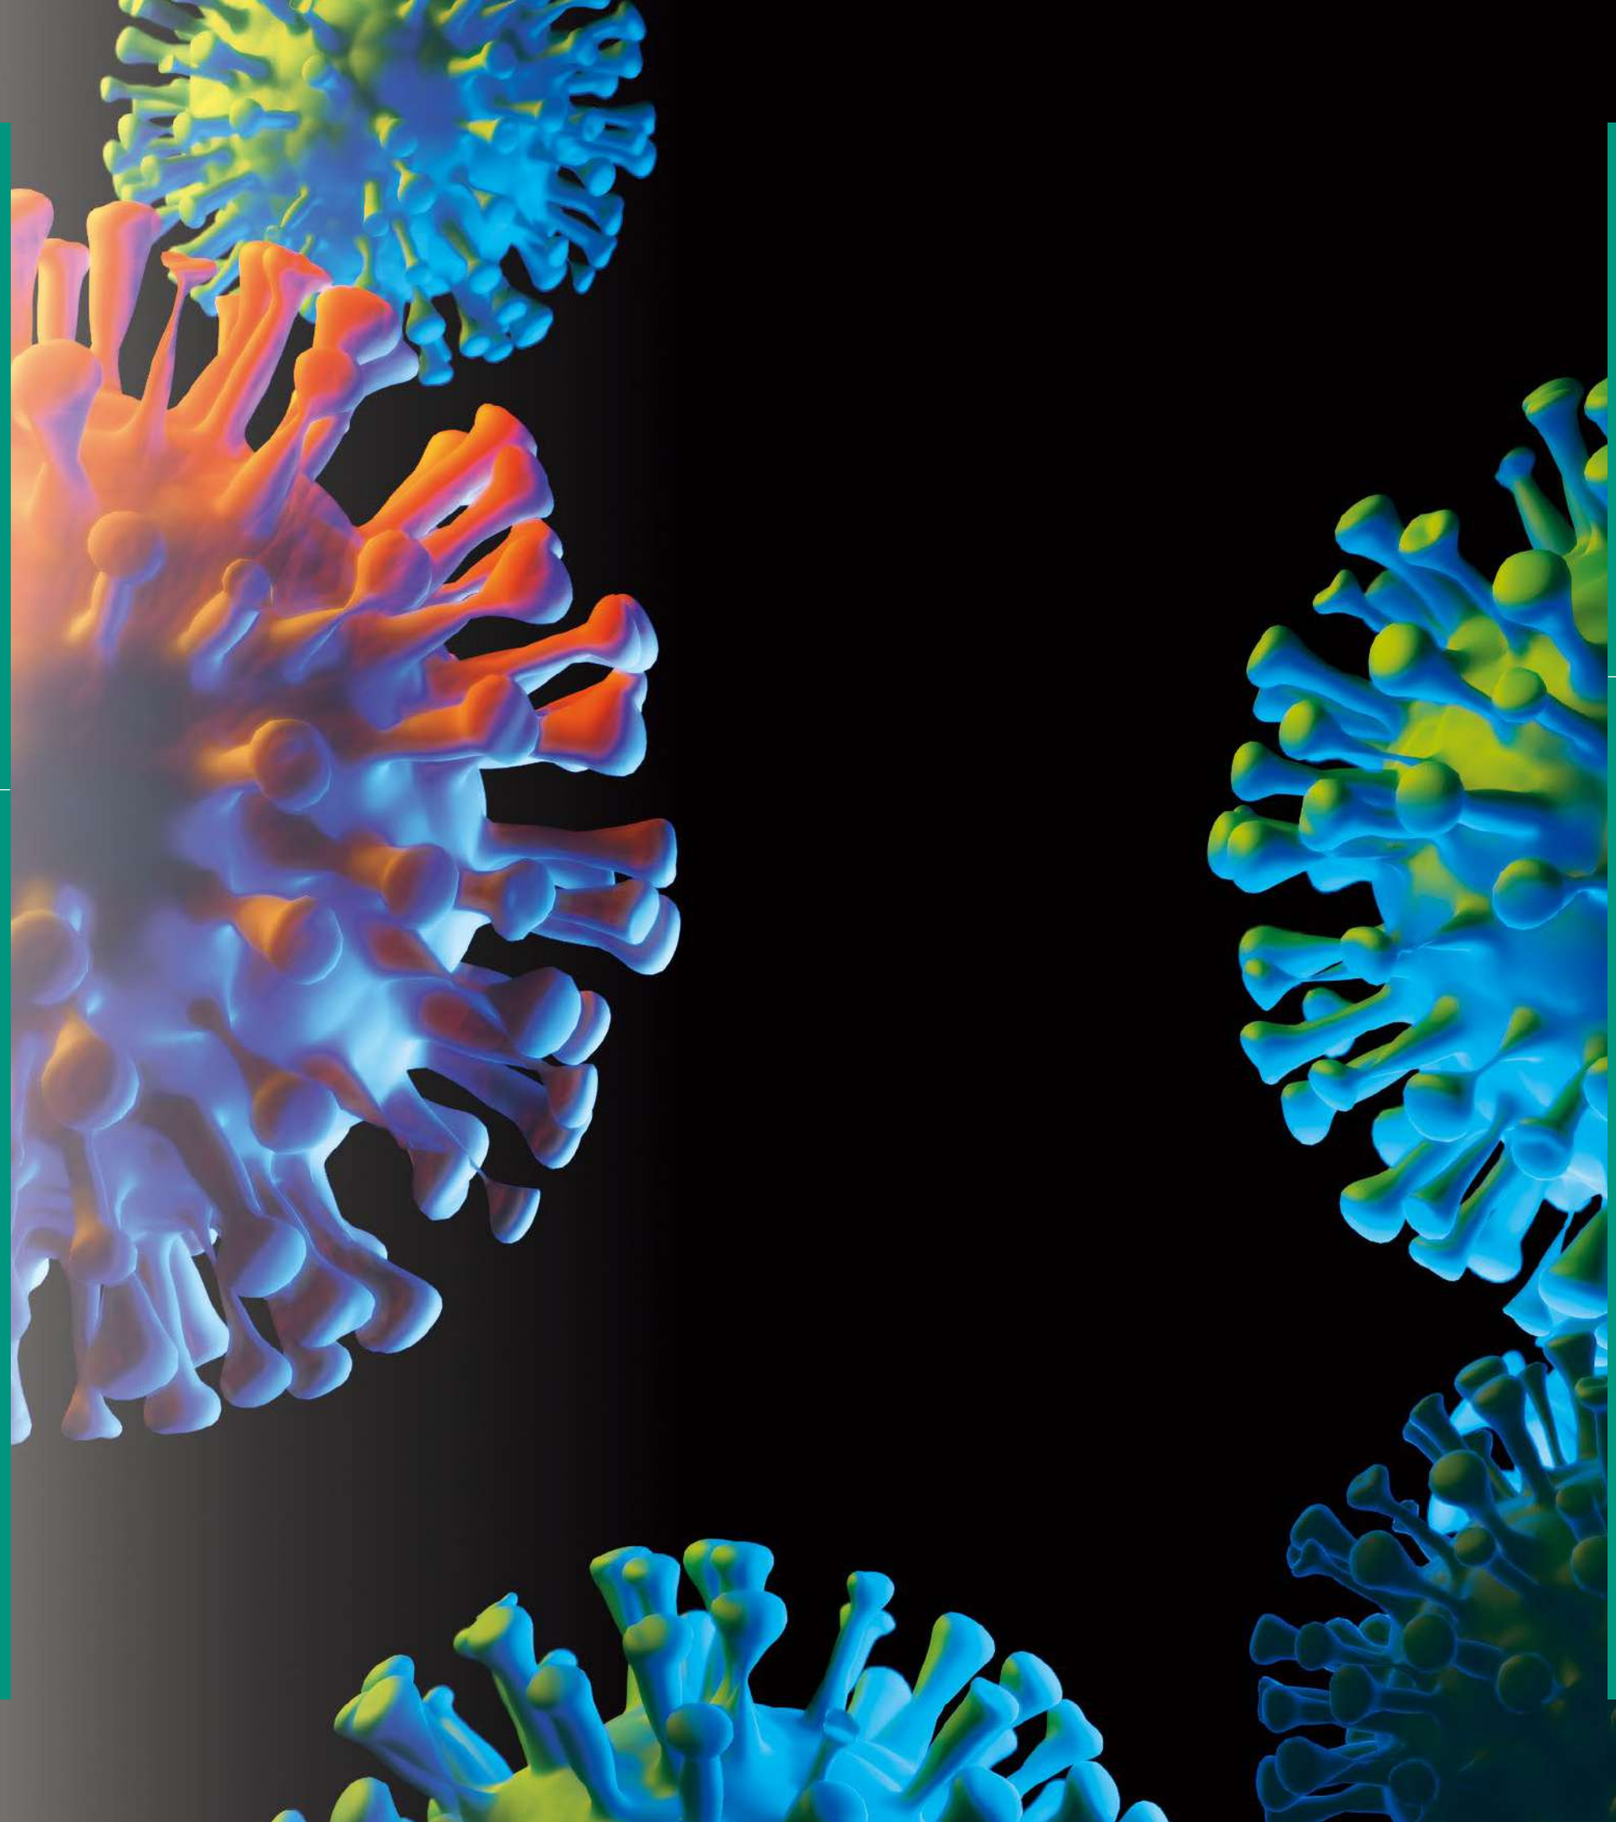
TARGET ENRICHMENT KITS FOR VIRUS RESEARCH

CELEMICS PRODUCTS & SERVICES 2022

Comprehensive Respiratory Virus Panel
African Swine Fever Virus Panel

CELEMICS



Comprehensive Respiratory Virus Panel

Research and Diagnosis of Respiratory viruses

DESCRIPTION

The CRV Panel is designed for the comprehensive analysis of clinically significant respiratory viruses that are widely assessed by medical institutions around the globe. The panel validation test with clinical samples showed superior whole genome sequencing (WGS) success rates compared to other competitor kits on the market. The panel tests for multiple infections by assessing all types of respiratory viruses including SARS-CoV-2. The panel includes all required kits including the RNA-to-cDNA Kit and cDNA-to-Captured Library Kit. The hybridization enhancer technology is used for rapid one-day workflow. Our customers can receive stand-alone bioinformatics software, 'Celemics Virus Verifier', which provides in-depth analysis information while ensuring the security of client sequence information.

KEY FEATURES

1. Coverage of wide range of respiratory pathogens	Assess WGS of 39 variants for 9 different virus types (SARS-CoV-2 solo analysis also available) Includes all types of respiratory viruses that are assessed by medical institutions around the globe
2. Superior WGS success rate even with poor quality specimen	Able to detect pathogens from patient specimens as well as poor quality environmental specimens Exceptional success rate of variant detection and WGS Significantly reduced gap formation
3. Double pandemic / coinfection detection	Detect all relevant viral strains in a single assay and test for multiple infections
4. Inclusion of Celemics Virus Verifier or bioinformatics analysis	Receive stand-alone bioinformatics SW Protect your easily-compromised data with our EU-GDPR compliant cloud system

SPECIFICATION

Target viruses*	9 types / 39 virus strains, including SARS-CoV-2
Target size	706 kb
Mutation type	Viral variants detection, Viral mutation (SNV, Indel) from generated Whole Genome Sequence
Sample type	Upper respiratory tract, Nasopharyngeal, Oropharyngeal specimens, and others
Platform	All sequencers from Illumina and Thermo Fisher
Kit composition	Provides all required reagents, including RNA to cDNA kit, cDNA to captured library kit, and bioinformatics software
Bioinformatics pipeline	Provides stand-alone bioinformatics software 'Celemics Virus Verifier' (FASTQ to Report)
Related publication	Evidence of long-distance droplet transmission of SARS-CoV-2 by direct air flow in a restaurant in Korea, J Korean Med Sci. (2020)

PATHOGEN LIST

Celemics provides stand-alone software for bioinformatics analysis, allowing customers to access the detailed data analysis information and ensuring the security of client sequence information.

African Swine Fever Virus Panel

Virus Research, Virus WGS Analysis

DESCRIPTION

The high morbidity and mortality of African swine fever (ASF) has a severe impact on the global swine industry. However, currently there is no effective treatments or vaccines commercially available. The ASFV panel is designed to identify 26 strains of genotype II virus in a single NGS run. The panel can be utilized for identifying the cause and infection route.

KEY FEATURES

1. Swine-specific blocking reagent	Provides swine-specific blocking reagent that effectively blocks repetitive sequences and allows for selectively retrieving the ASFV sequence
2. Comprehensive analysis of ASFV subtypes	Detect genotype II virus subtypes with specifically designed probes
3. Convenient testing	Highly accurate results from blood samples, often considered more challenging due to the lower viral load compared to concentrated culture supernatant or spleen tissue sample

SPECIFICATION

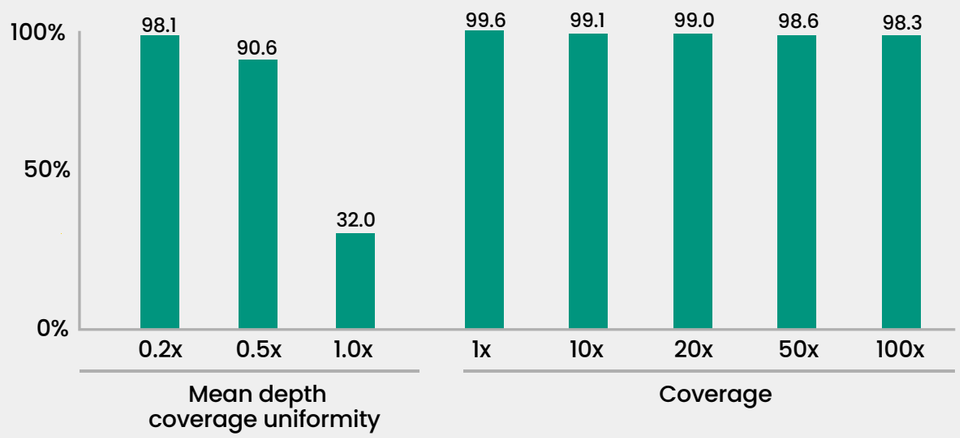
Target viruses*	ASFV 26 strains
Target size	192 kb
Mutation type	Virus detection, Virus genome assembly
Sample type (amount)	Swine blood (50 ng of fragmented DNA)
Platform	All sequencers from Illumina, Thermo Fisher, MGI, PacBio, and Oxford Nanopore
Bioinformatics pipeline	Celemics ASFV Pipeline (FASTQ to Result)

* Gene Add-On Service: Genes can be added by customer's request

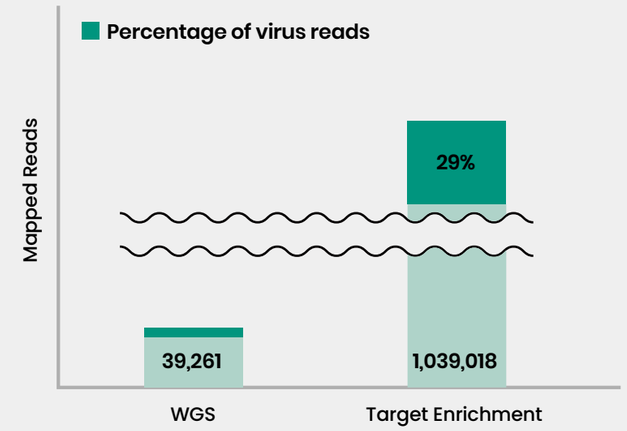
ASFV DETECTION WORKFLOW

PERFORMANCE

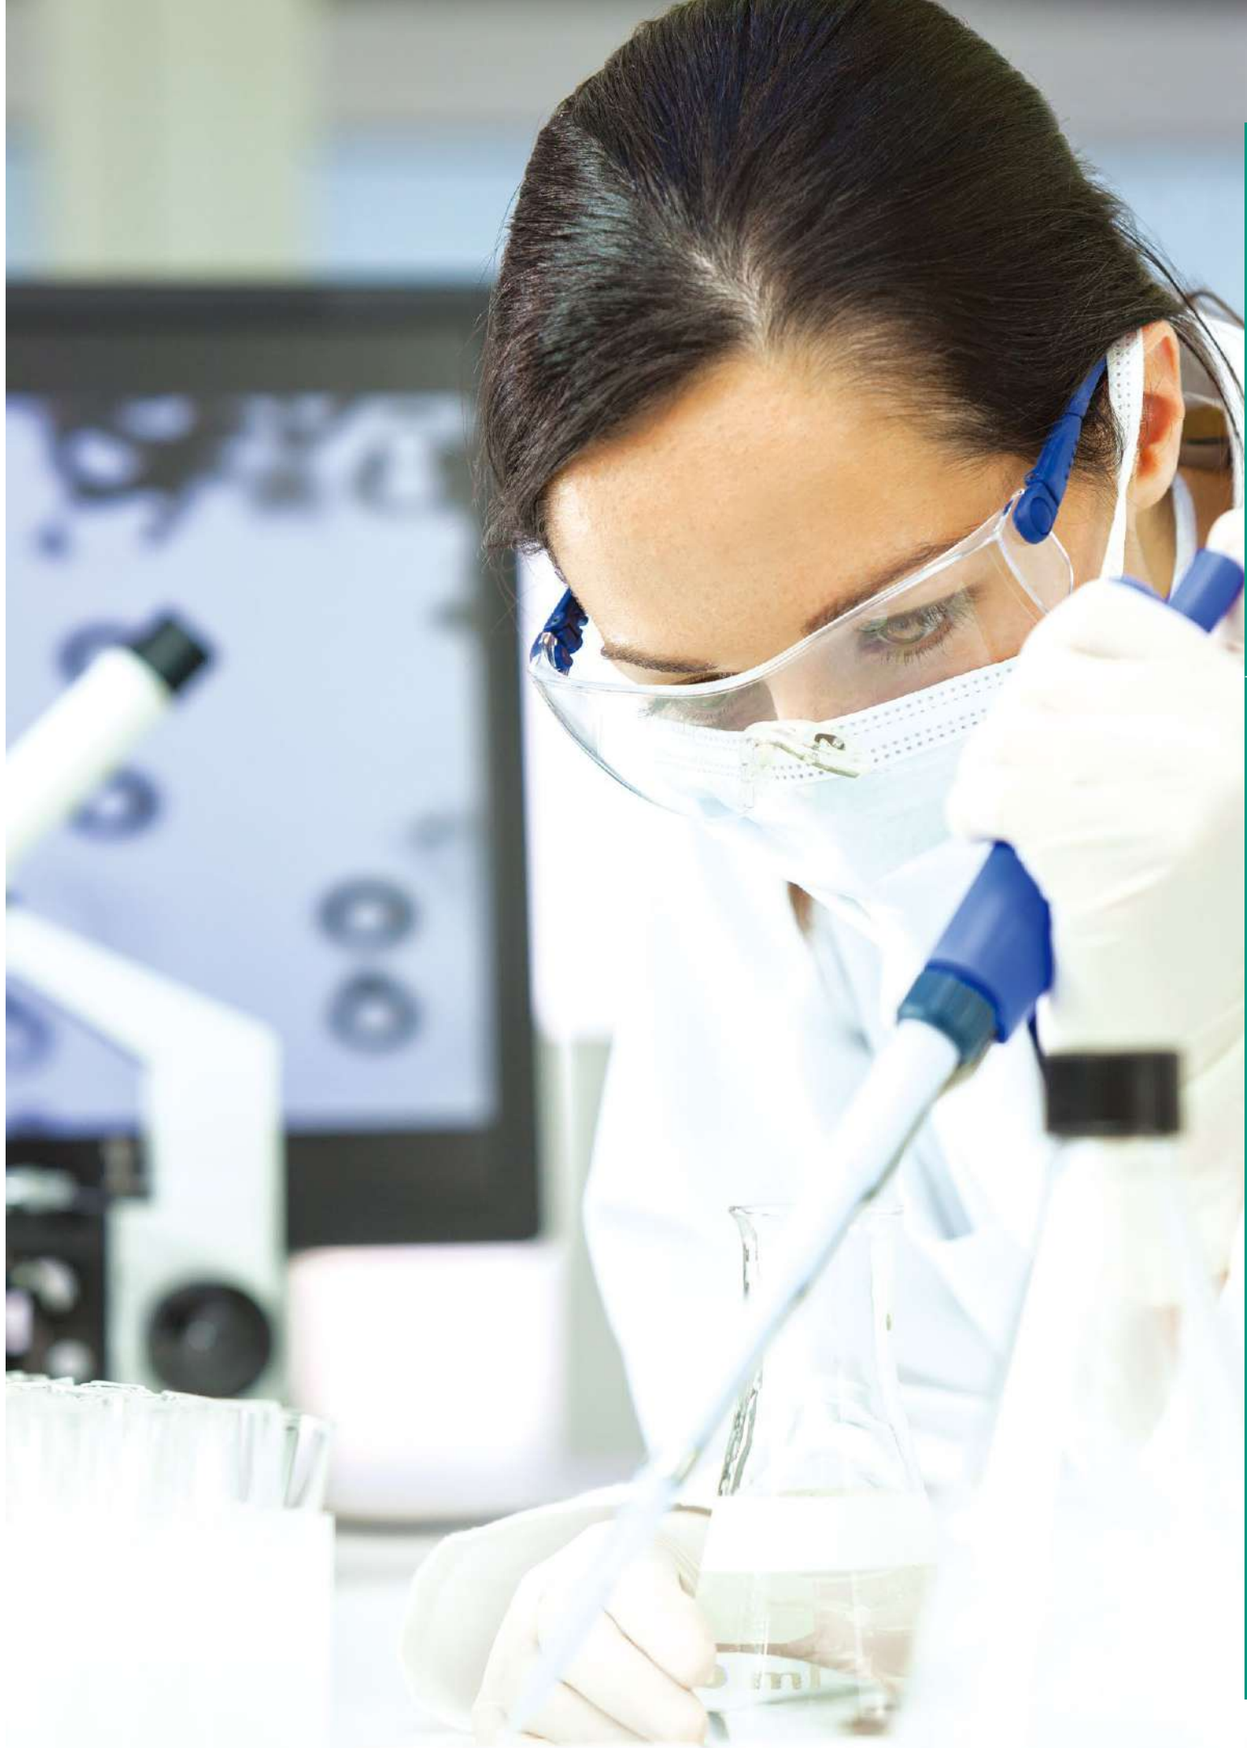
Advanced target enrichment technology enabling exceptional capture performance with high coverage and uniformity



The panel validation result shows high uniformity and high coverage at all levels.



With the same sequencing amount, target enrichment NGS yielded 29% virus reads out of a total of 1,039,018 reads, while whole genome sequencing (WGS) yielded 0.5% virus reads (green) out of a total of 39,261 reads.

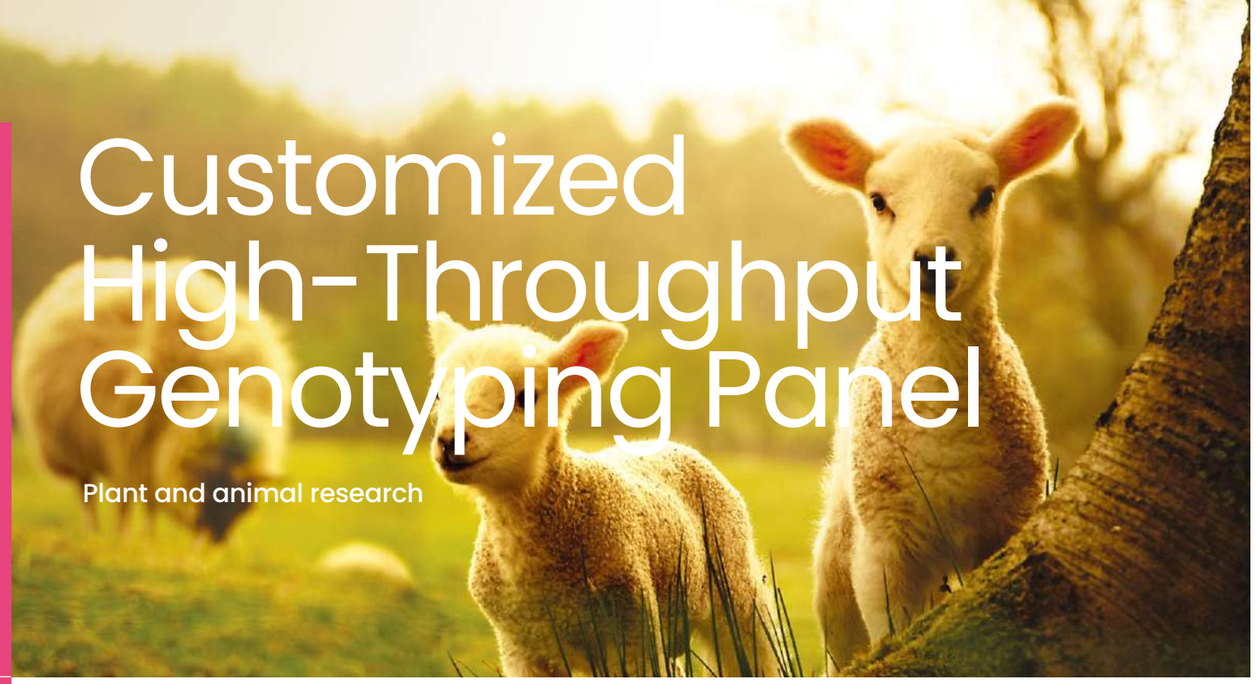


TARGET ENRICHMENT KITS FOR AGRICULTURE & ANIMAL RESEARCH

CELEMICS PRODUCTS & SERVICES 2022

Customized High-Throughput Genotyping Panel

CELEMICS



Customized High-Throughput Genotyping Panel

Plant and animal research

DESCRIPTION

For molecular breeding, the availability and easy accessibility of genomic resources is a prerequisite. Although technological advances have provided a range of resources like molecular markers, genetic linkage maps, whole genome sequences and transcriptomes, agricultural genomics has faced many challenges. Celemics provides a solution with the High-Throughput Genotyping Panel. We have utilized NGS methods, whereby a high number of regions of interest are simultaneously enriched using specifically designed probes to provide new insights into different agricultural genomics research.

KEY FEATURES

1. NGS-based target enrichment sequencing assay	Utilize NGS-based target enrichment methods for higher accuracy and cost-effectiveness compared to conventional methods such as conventional GBS, PCR, and microarray
2. Comprehensive analysis with high accuracy	Perform comprehensive assay of 100 to 10,000 markers with minimized false-negatives and false-positives Discover novel SNPs
3. Cost-effective analysis	Benefit from Celemics' library preparation kits, target capture technology, and multiplexing indices specifically designed for high-throughput genotyping
4. Outstanding performance regardless of various origins	Receive high-quality results enabled by species-specifically designed blocking oligos across all types of origins

PACKAGE COMPOSITION

Package name	Compositions		
Target Enrichment	Target capture Probe	-	
Standard	Target Enrichment reagents	Library prep Kit	-
All-In-One			Beads / Polymerase

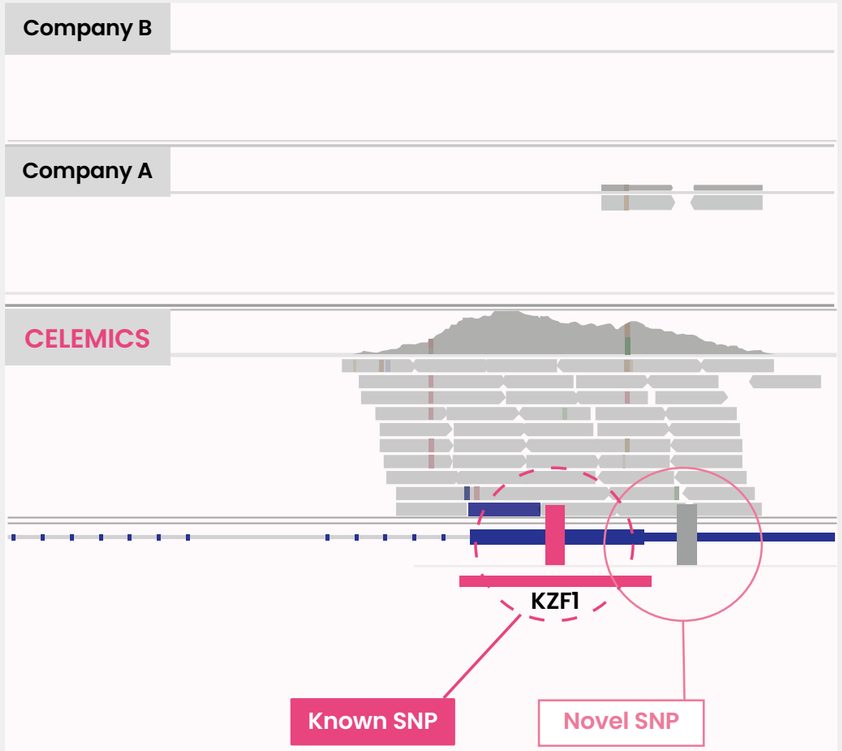
Package option	Options	
Pooling method	Single Reaction	Pre-capture Pooling
Library Preparation kits	Standard Kit	EP-kit
Hybridization Enhancer	Included	Not included

COMPARISON WITH CONVENTIONAL TECHNOLOGIES

	Advantages	Disadvantages
Conventional GBS	1. Sequencing of multiple samples due to lower amount of data required compared to WGS	1. Limited biomarkers available due to limited conserved regions, reducing overall resolution 2. Unable to detect SNPs in the restriction sites
Microarray	1. Higher reproducibility than conventional GBS	1. Hard to customize new targets (novel biomarkers) 2. Low flexibility to meet various kinds of genotyping
PCR	1. Cost-effective for low number of samples 2. Easy and fast analysis	1. Limited number of biomarkers to analyze at once 2. Inappropriate for mass-analysis of biomarkers
Celemics Target Enrichment	**1. Cost saving** : Highly cost-effective when assessing multiple samples **2. Flexible customization** : Novel biomarkers can be added or removed **3. Comprehensive analysis** : Including novel SNP discovery **4. Exceptional performance** : Celemics proprietary blocking oligo design technology **5. Wide compatibility** : Compatible with a wide range of sample types	

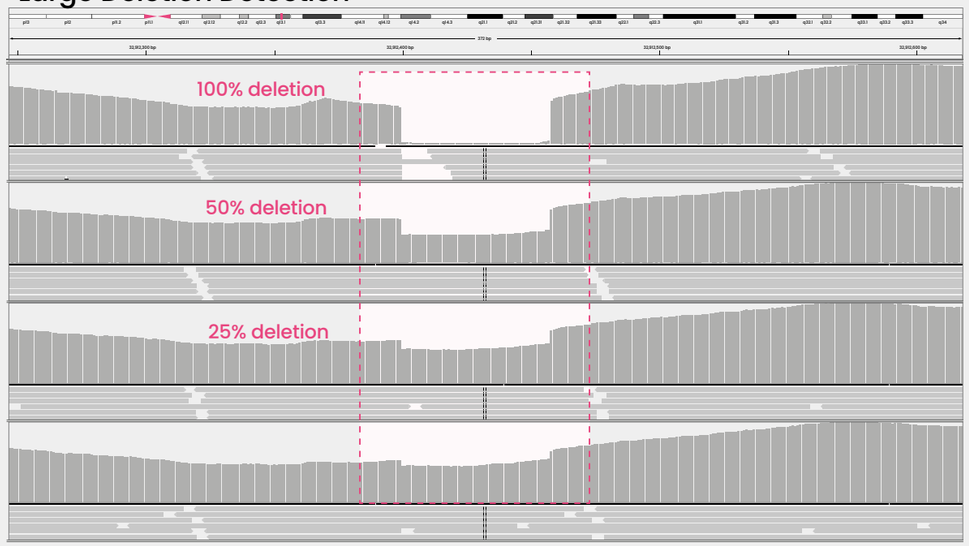
PERFORMANCE

Hybridization-based NGS target enrichment enables discovery of novel SNPs near target regions



PERFORMANCE

Hybridization-based NGS target enrichment enables accurate analysis of all mutation types including large deletion and rearrangement.



**Artificially generated data used*

CELEMICS SOLUTIONS FOR METAGENOMIC SEQUENCING

CELEMICS PRODUCTS & SERVICES 2022

Metagenomic Sequencing Service and Kit

CELEMICS

Metagenomic Sequencing Service and Kit

16S V4 / 16S V3-V4 / 18S ITS1 / 18S ITS1-ITS2

DESCRIPTION

Metagenomic Sequencing Service and Kit is used for microbiome and mycobiome studies. The service allows for characterizing and differentiating a myriad of microbial species. The 16S V4 (or V3-V4) region of bacteria and archaea and 18S ITS1 (or ITS1-ITS2) region of fungi is amplified by PCR. After cleaning up using CeleMag beads, the indices and adapters are attached for NGS and bioinformatics analysis. According to the purpose of customer's studies, various analysis reports are provided by the Celemics robust analysis pipeline. Please contact us for further information.

EXPERIMENT WORKFLOW

1. PCR amplification against gDNA using 16S region or ITS region specific primers
2. Bead cleanup
3. Index and adapter ligation with Nextera Index sets
4. Bead cleanup
5. Library pooling
6. NGS Sequencing

Barcode Tagged Sequencing™ (BTSeq™)

CELEMICS PRODUCTS & SERVICES 2022

BTSeq™ – Standard Service and Kit
BTSeq™ – Viral Analysis Service
BTSeq™ Mitochondrial DNA Sequencing Service
BTSeq™ Full Plasmid Sequencing Service

CELEMICS

Barcode-Tagged Sequencing™ (BTSeq™)

Wide Range of DNA Sizes

- No limitation of DNA size: 200 bp - 20 kb or longer
- Plasmid sequencing with large insert DNA

NGS-based, High Sequencing Accuracy

- NGS-based high sequencing quality
- Digitized sequencing results

Fast TAT, No Need for Primer Walking

- NGS-based result, within 24 hours after sample arrival
- No need for primer synthesis
- No need of repetitive Sanger sequencing cycles

Cost-effective

- Unparalleled cost-effectiveness compared to Sanger
- Only sequencing primer information required, eliminating the need for synthesizing the primers

No Limitation of Origin

- Sequencing samples of various species
- Virus, Bacteriophage, Mycobiome, etc.

No Need of High Concentration Sample

- Compatible with unpurified PCR products
- Low-amount sample requirements as little as 10 ng/μl

BTSeq™ SERVICE

- BTSeq™ – Viral Analysis Service
- Mitochondrial DNA Sequencing Service
- Full Plasmid Sequencing Service
- Microbial Identification Service

BTSeq™ – Standard Service and Kit

DESCRIPTION

For the last few decades, Sanger Sequencing has been the standard for analyzing DNA sequences. Due to its need for repetitive primer design, primer synthesis, and sequencing steps during Primer Walking when analyzing long sequences, however, it requires lengthy experimental time and large costs to perform. Additionally, issues such as high re-experimentation rates, intermittent errors, and a less than 1 kb read length limitation have made sequence analysis difficult for clients. To overcome these limitations, Celemics created an NGS-based molecular barcoding technology and NGS error elimination algorithm solution, allowing for the analysis of sequences with lengths greater than 1kb without the need of sequencing primers.

KEY FEATURES

Long DNA sequencing, No need of sequencing primer	Analyze from 200 bp to 20 kb and longer length in a single reaction No need of sequencing primer* No need of repetitive primer walking for long DNA de novo sequencing
Cost-effective, highly accurate, rapid turnaround time	Novel NGS-based proprietary enzyme and bioinformatics technology Cost-effective sequencing compared to Sanger sequencing Secure sequencing accuracy with NGS-based sequencing that yields more reliable results than Sanger sequencing Receive digitized results within 1-2 business days
Wide compatibility	Various applications with no limitation on DNA size or sample types across a broad range of origins Compatible with unpurified PCR products**

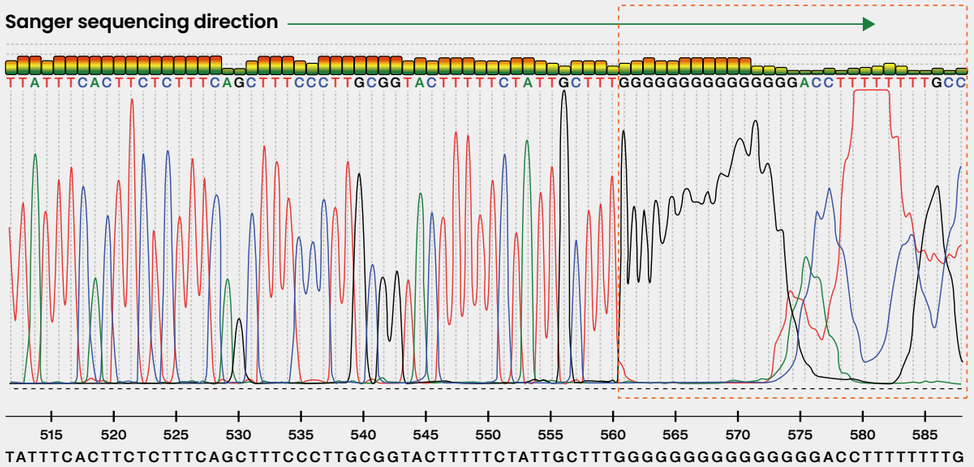
* Only primer sequence information is required
** Only samples that have single bands from gel electrophoresis are accepted

HIGH ACCURACY ACHIEVED BY NGS-BASED BTSeq™ SEQUENCING SERVICE

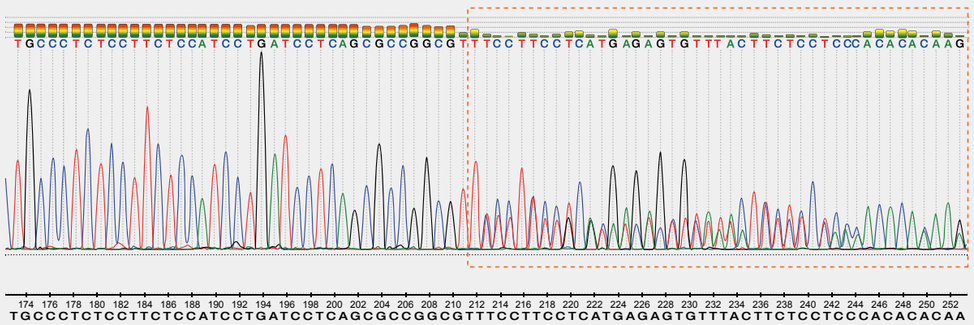
Sanger sequencing has been the gold standard sequencing method. Although Sanger sequencing service providers have supported researchers for several decades, the high competition among providers led to cost reduction in Sanger sequencing reagents. Most Sanger sequencing service providers started diluting the reagents and applying methods that are not recommended for the best quality result. This has resulted in inaccurate sequencing results and repetitive sequencing cycles.
While Sanger sequencing may have many limitations such as homopolymer sequencing, multi-peak problems, and detecting Indel or frameshift mutations, BTSeq™ overcomes such limitations and provides accurate sequencing data even from poor quality or low-amount samples.

Limitations of Sanger sequencing

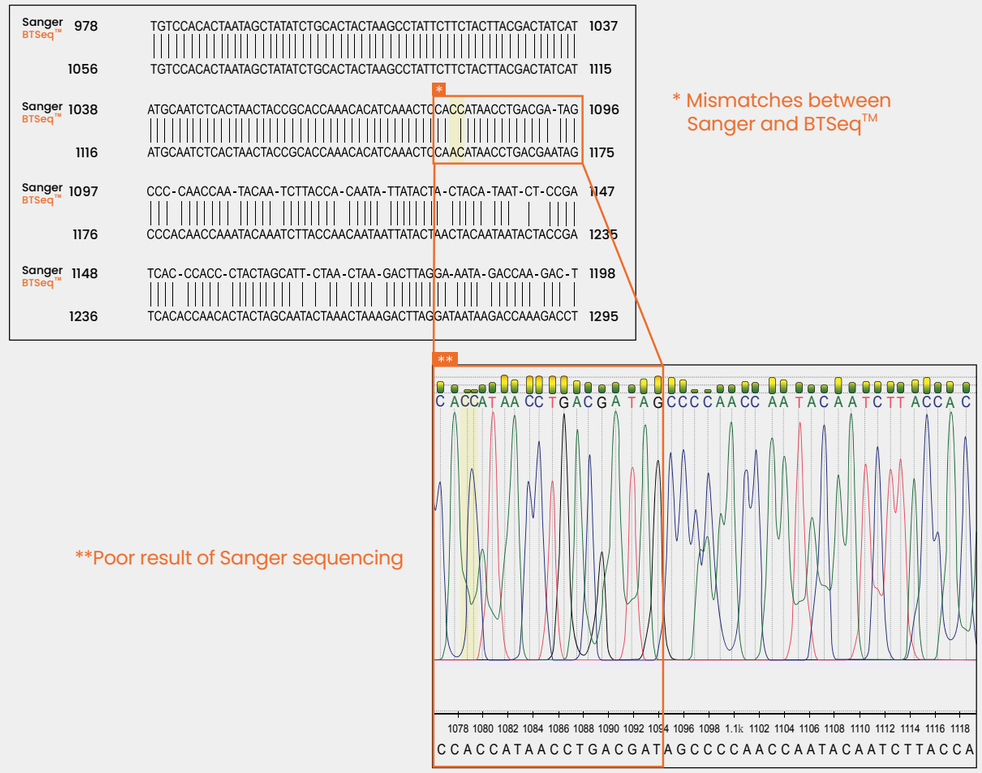
Example of homopolymer problem in Sanger sequencing



Example of multi-peak problem in Sanger sequencing



Accurate sequencing of BTSeq™



Most mismatches between BTSeq™ and Sanger sequencing results were due to the minor peaks or poor-quality results from Sanger sequencing.

Comparison between Sanger and BTSeq™

	Sanger	BTSeq™
Data type	Analog	Digital
Data quality	Ambiguous	Clear
Analysis size	Up to 1 kb	Up to 20 kb or longer
Sample concentration	> 100 ng/μl	> 10 ng/μl
Sample amount	> 20 μl	> 10 μl

COMPARISON TEST

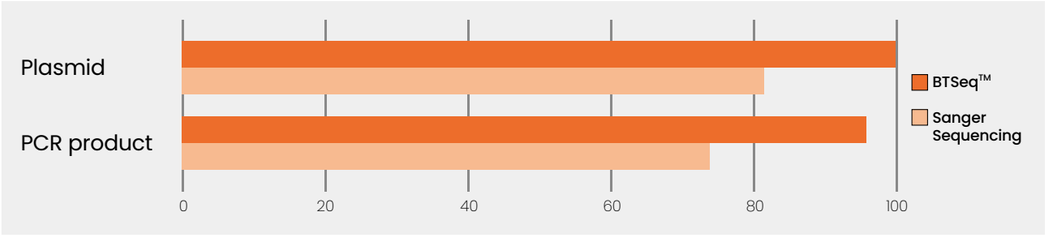
To assess the performance of BTSeq™, we have conducted multiple comparison tests with Sanger sequencing method. The samples that were sequenced by Sanger were provided by a Sanger Sequencing partner and randomly selected for BTSeq™ validation test. More than 80% of PCR product samples were not purified. The sample concentration ranged from 0.1 ng/μl to 200 ng/μl and 1 μl (0.1 ng – 200 ng) of each sample were used for BTSeq™. The results show high concordance of BTSeq™ with Sanger sequencing with even higher accuracy.

BTSeq™ shows errorless sequencing results

Number of Samples	Plasmid (n=454)		PCR product (n=801)	
Method	**BTSeq™**	**Sanger Sequencing**	**BTSeq™**	**Sanger Sequencing**
Unidentified	0	85**	36*	211**
Identified	454	369	765	590
Analysis success rate (%)	100.0%	81.3%	95.5%	73.7%

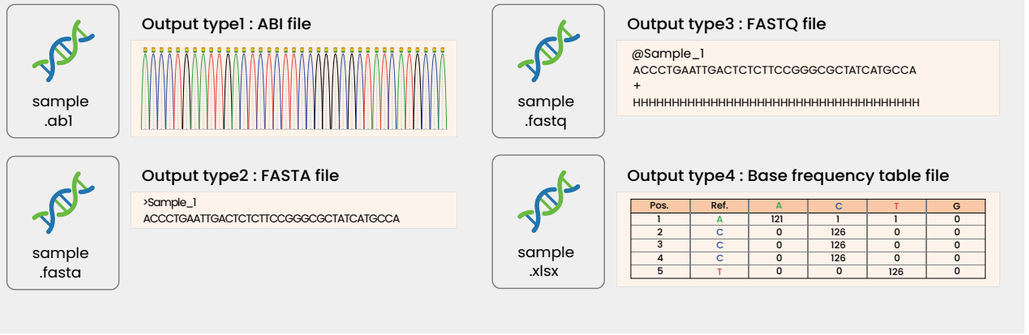
* Long repeated sequences
** Poor sequencing results

Analysis Success Rate (%)



DIGITIZED RESULTS*

The BTSeq™ service, an NGS-based sequencing service, provides digitized results by standalone bioinformatics analysis software enabling various options for result data



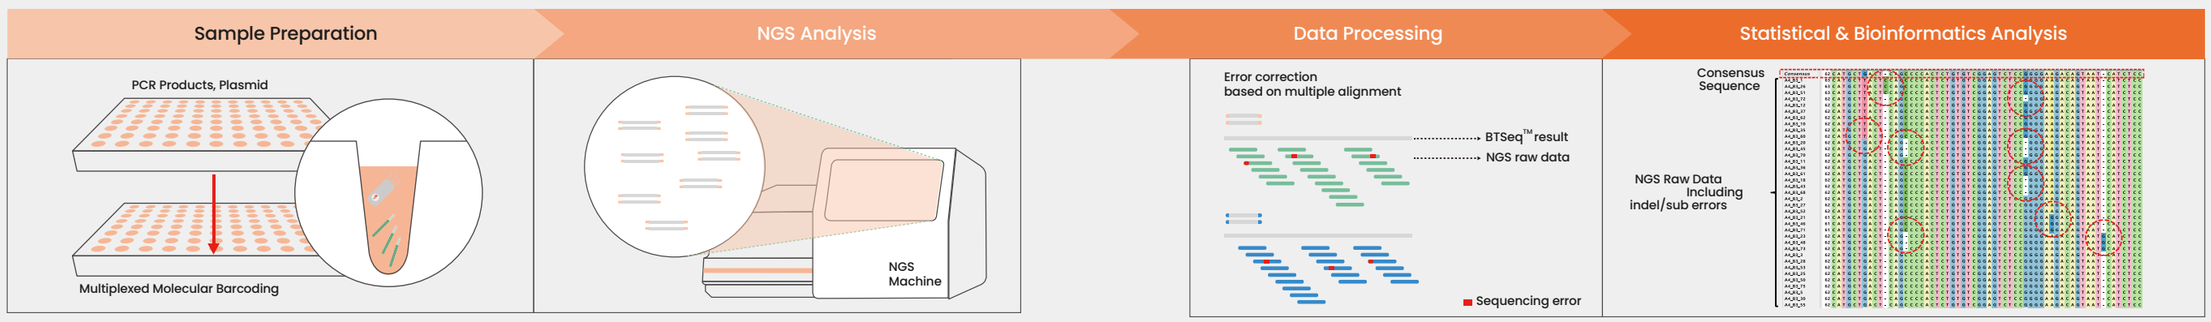
* Different options provided for different applications. Contact us for more information.

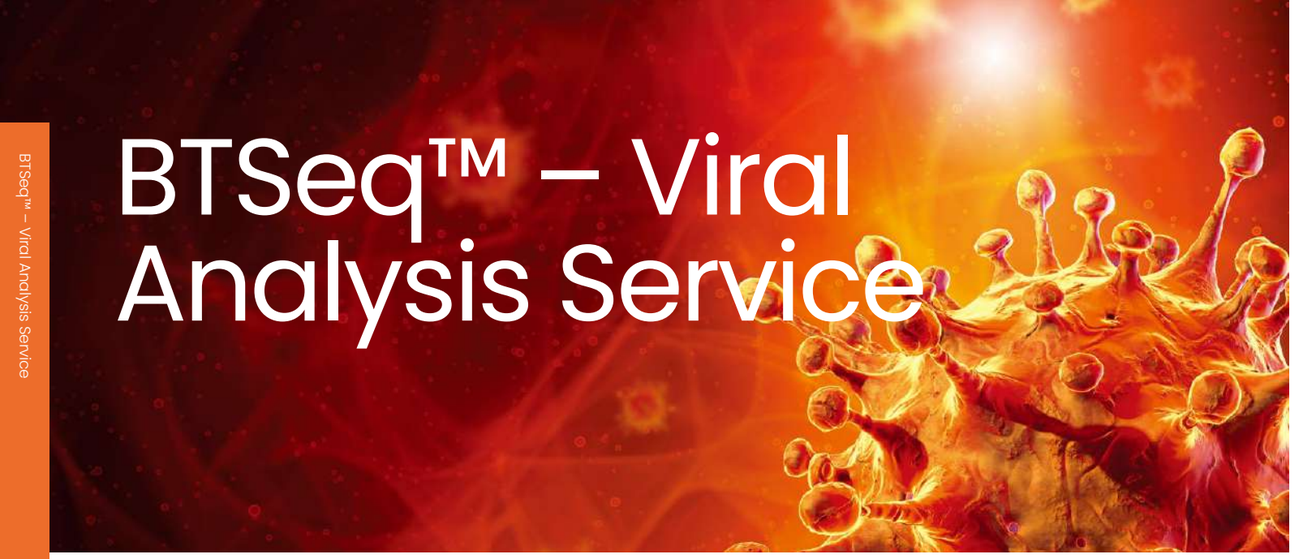
BTSeq™ SERVICE OPTIONS

Product Group	Service Option	Sample Type	Description
BTSeq™	BTSeq™ – Standard	PCR product / Plasmid	Primer sequence information is required*
	Plasmid Extraction	E. coli	-
	BTSeq™ – Raw Data	PCR product / Plasmid	Provides FASTQ file only

BTSeq™ SERVICE PROCESS

Celemics has developed sample preparation techniques and bioinformatics software enabling cost-effective workflow. The BTSeq™ sequencing provides highly accurate results with short turnaround time (TAT) by effectively correcting sequencing errors and generating consensus sequence with Celemics proprietary techniques.





BTSeq™ – Viral Analysis Service

DESCRIPTION

In most cases, RNA of the host cell is separated and purified along with viral RNA during extraction.
This leads to an excessive amount of data being required to perform typical Total RNA-seq compared to the entire viral genome, leading to low-quality data and high costs. Celemics solves this issue by developing extremely uniform amplification technology and bioinformatics software, which in turn provides quality data by efficiently eliminating any gaps generated from bias in the RT-PCR step.

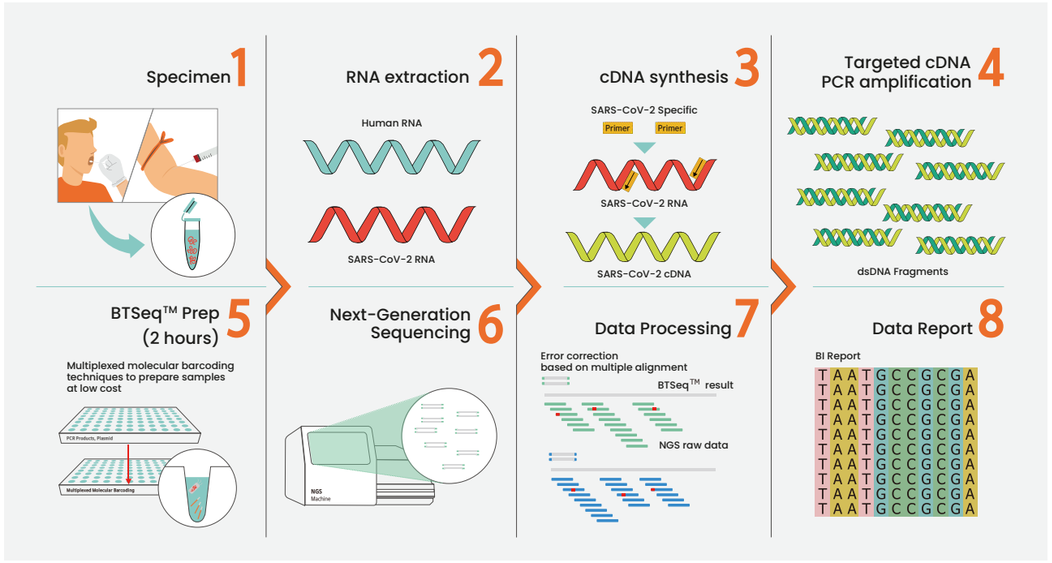
KEY FEATURES

1. High quality result generation from minuscule low-quality RNA samples	Enabling of high-quality whole genome analysis, even in minuscule low-quality RNA samples extracted from upper respiratory tract, nasopharyngeal, oropharyngeal swab clinical specimens
2. Results provided within 24 hours	Provision of whole novel coronavirus genome within 24 hours using Celemics' proprietary reagent and bioinformatics technology
3. High-quality data generation at cost-effective price	High-quality result generation, even from miniscule amounts of clinical samples

REQUIREMENTS

Sample type	RNA
Concentration	Ct value < 25
Volume	40 µl
Turnaround time	Within 3-5 business days from sample collection
Shipment	Shipping on dry ice (essential)

SERVICE PROCESS



COMPARISON BETWEEN TOTAL RNA SEQUENCING AND BTSeq™

	Total RNA-Sequencing	BTSeq™
cDNA Synthesis	**Total RNA (host and viral) into cDNA** : Leads to unnecessary data and high sequencing cost	**Only viral RNA to cDNA** : Utilizes Virus specific multiplex primers to selectively amplify viral RNAs from total RNAs
Target Enrichment	**No target enrichment required** : Viral RNA coexists with host RNA when cDNA synthesis is performed	**Viral genome is specifically amplified** : Only a small amount of viral RNA is required
Library Preparation	RNA library prep using RNA library kit: **4 hours**	Simple library prep using BTSeq™ reagent: **2 hours**
Data Analysis	: Mapped to the viral genome : Read/assembly based classification	: Mapped to the viral genome : Read/assembly based classification
Turnaround Time	**2-3 weeks**	**1-2 days**

FULL COVERAGE OF SARS-COV-2 WGS ANALYZED BY BTSeq™ FROM PATIENT SPECIMENS

GENOME SEQUENCES

Genome Sequences of Two GH Clade SARS-CoV-2 Strains Isolated from Patients with COVID-19 in South Korea

Minwoo Kim,[a] Youn-Jung Lee,[b] Jae Sun Yoon,[b] Jin Young Ahn,[b] Jung Ho Kim,[b] Jun Yong Choi,[b] Jong-Won Oh[a]

[a]Department of Biotechnology, Yonsei University, Seoul, South Korea
[b]Division of Infectious Diseases, Department of Internal Medicine, Yonsei University College of Medicine, Seoul, South Korea

Minwoo Kim and Youn-Jung Lee contributed equally to this work. Author order was determined by drawing straws.

ABSTRACT We report the genome sequences of two GH clade severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) strains isolated from nasopharyngeal swabs from patients with coronavirus disease 2019 (COVID-19) in South Korea. These strains had two mutations in the untranslated regions and seven nonsynonymous substitutions in open reading frames, compared with Wuhan/Hu-1/2019, showing 99.96% sequence identity.

Using the QIAamp viral RNA minikit (Qiagen, Hilden, Germany), RNA was extracted from the virus, which had been purified by passaging the swab samples three times on Vero cells (ATCC CCL-81) by the limiting dilution method (4). Viral cDNA synthesized using ProtoScript II reverse transcriptase (New England Biolabs, Ipswich, MA, USA) was amplified as described previously (5, 6), using in-house-designed primer sets and the Illumina platform-based BTSeq SARS-CoV-2 whole-genome sequencing (WGS) kit (Celemics, Seoul, South Korea) for multiplex amplicon sequencing on a MiSeq sequencer (150-bp paired-end mode; Illumina, San Diego, CA, USA). After dual-index

patient 8. All of the studies were approved by the institutional review board (IRB) of Severance Hospital, Yonsei University Healthcare System, with written informed consent from the patients (IRB protocol number 4-2020-0076).

Using the QIAamp viral RNA minikit (Qiagen, Hilden, Germany), RNA was extracted from the virus, which had been purified by passaging the swab samples three times on Vero cells (ATCC CCL-81) by the limiting dilution method (4). Viral cDNA synthesized using ProtoScript II reverse transcriptase (New England Biolabs, Ipswich, MA, USA) was amplified as described previously (5, 6), using in-house-designed primer sets and the Illumina platform-based BTSeq SARS-CoV-2 whole-genome sequencing (WGS) kit (Celemics, Seoul, South Korea) for multiplex amplicon sequencing on a MiSeq sequencer (150-bp paired-end mode; Illumina, San Diego, CA, USA). After dual-index

filtering and adapter trimming using in-house scripts, reads (69,447 and 66,754 reads for isolates YS006 and YS008, respectively) were mapped to the reference sequence of Wuhan/Hu-1/2019 (GenBank accession number MN988668) (nucleotides 1 to 29870) (7) with BWA v0.7.17-r1188 (8), generating consensus genome sequences of strains SARS-CoV-2/human/KOR/YS006/2020 (29,825 nucleotides) and SARS-CoV-2/human/KOR/YS008/2020 (29,826 nucleotides) isolated from patients 6 and 8, respectively, with average coverage depths of 98.65× and 95.5×, respectively. The consensus sequences for YS006 (nucleotides 16 to 29840) and YS008 (nucleotides 16 to 29841) had no indels. The nearly complete genomes of these isolates, which lack 15 nucleotides and 29 or 30

BTSeq™ Mitochondrial DNA Sequencing Service

DESCRIPTION

The BTSeq™ Mitochondrial DNA Sequencing enables accurate analysis of clinical variability and genetic heterogeneity. By sequencing 17 kb-long mtDNA with newly developed NGS-based technology, customers can decipher the instability and variations of mtDNA associated with many metabolic and neurologic disorders and cancers. The service provides highly accurate results with fast TAT and cost-effectiveness.

REQUIREMENTS

Sample Type	gDNA
Concentration	50 ng/μl
Volume	10 μl
Turnaround time	Within 4 business weeks from sample arrival
Shipment	Ship on ice

BTSeq™ Full Plasmid Sequencing Service

DESCRIPTION

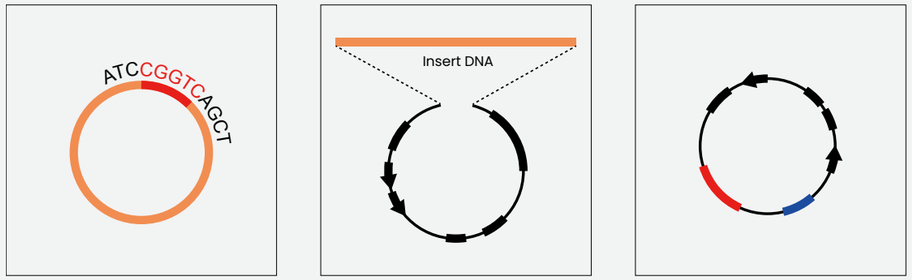
The BTSeq™ Full Plasmid Sequencing Service allows for the most effective analysis of the full-length sequencing of plasmids with shorter TAT and lower cost than Sanger sequencing. The service is ideal for protein engineering, vector engineering, antibody optimization, synthetic biology, and various other applications.

REQUIREMENTS

Sample type	PCR product, Plasmid*	
Concentration	10 ng/μl	
Volume	10 μl	
Turnaround time	Within 1 business day from sample arrival	
Packaging	1) RT 2) Ship on ice (Recommended)	

* Contact us for plasmids longer than 20kb

APPLICATIONS OF BTSeq™ FULL PLASMID SEQUENCING

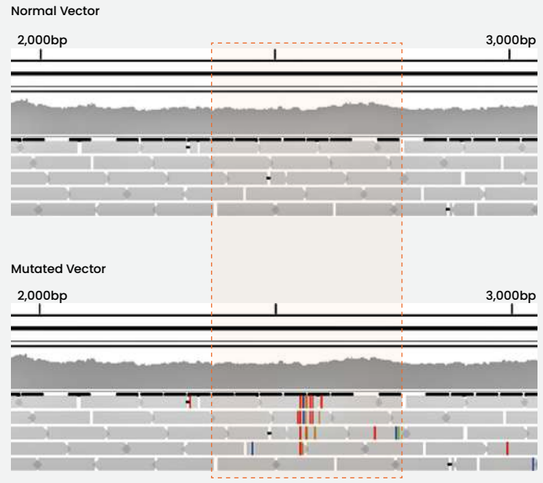


Confirmation of vector sequence

Sequencing large insert

Vector engineering

COMPARISON IGV DATA BETWEEN NORMAL AND MUTATED VECTORS



CELEMICS SOLUTIONS FOR IMMUNE REPERTOIRE SEQUENCING

Immune Repertoire Profiling Service
TrueRepertoire™ Service

CELEMICS

Immune Repertoire Profiling Service

DESCRIPTION

Immune repertoire often represents an individual's current immunological status; whether the person is healthy, vaccinated, diseased, or infected. Only high-throughput NGS analysis can comprehensively profile an individual's immune repertoire. The Immune Repertoire Profiling Service provides effective data acquisition, integration, and interpretation for the customers.

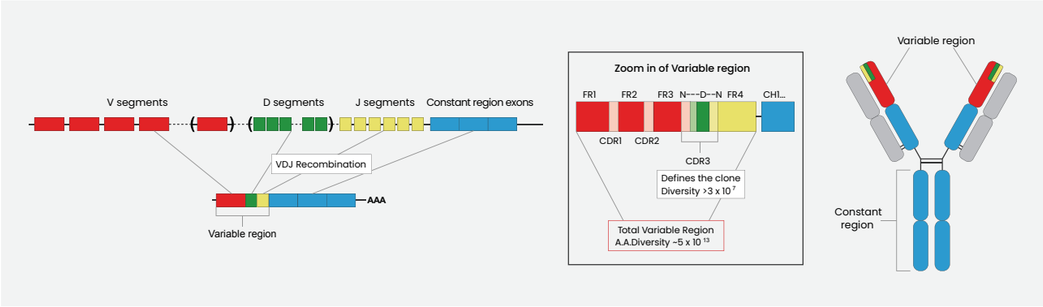
KEY FEATURES

1. Quantitative analysis of library diversity	- NGS-based analysis of complex antibody library consisting of millions (10^6~10^{12}) of sequences in a single experiment - Analysis of immunoglobulin and T-cell receptor repertoire; analysis of BCR/TCR for each clone - Frequency analysis of individual antibody clones within the library, identifying major and minor clones
2. Tracking of clonal frequencies for each sample	- For antibody discovery, analysis of library diversity according to its panning degree enabling monitoring changes in clonal frequency - Minimized omission of potentially significant antibody clones - Analysis of immune repertoire characteristics from blood sample and monitoring of each clone
3. Various analysis options for immune system studies	Perform the experiment with drastically reduced time and cost enabled by the advanced technology of MSSIC developed by Celemics

REQUIREMENTS

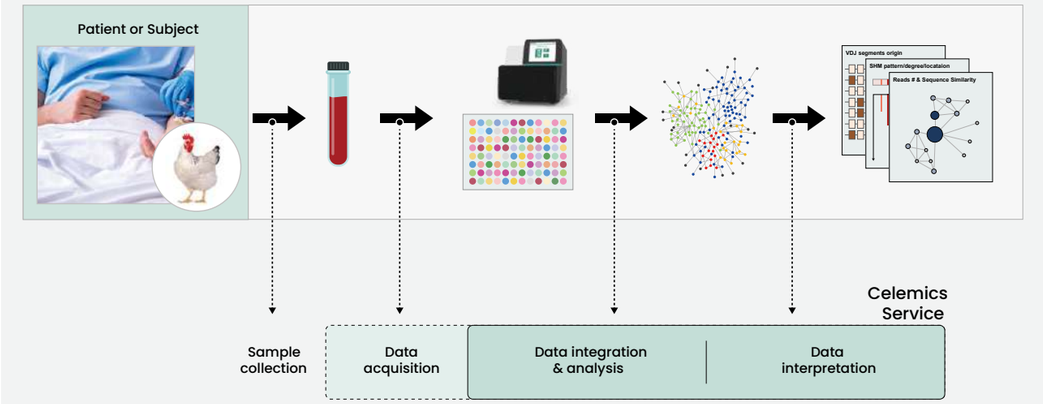
Sample type	Total RNA from B-Cell or/and T-Cell, DNA from B-Cell or/and T-Cell, DNA/RNA Amplicons
Concentration	100 ng/μl
Amount	1 μg
Turnaround time	Within 4-6 business weeks from sample collection
Temperature	RT for storage and shipment

DIVERSITY OF ANTIBODY



The antibody genes are composed of many different segments. The antibodies are presented in B cells with great diversity of 10^{13} repertoires.

GENERAL WORKFLOW



Celemics provides service for data acquisition, integration, and analysis, and interpretation.

IMMUNE PROFILING EXAMPLES

Example 1 - Discovery of candidate antibodies from actively immunized chickens

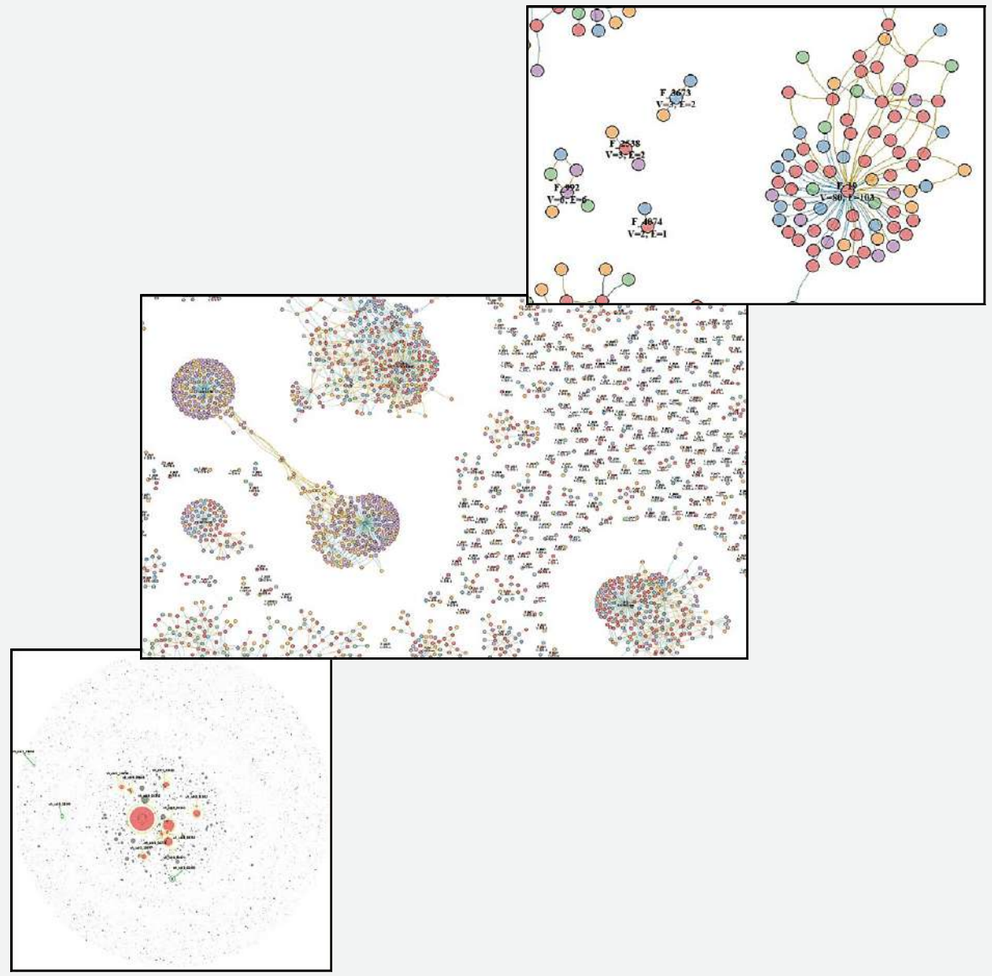
Network Analysis Between Antibody Sequences



TrueRepertoire™ Service

DESCRIPTION

The TrueRepertoire™ is a NGS-based antibody library sequencing platform developed to overcome the key issues of existing methods such as sequencing error, short-read length, and high-cost gene synthesis for further characterization. Celemics has developed a cloning microchip, barcode assay technology, and laser-based non-contact clone retrieval system and integrated into the newly developed platform, TrueRepertoire™ assay. This service allows for full sequence analysis of over 10,000 clones in a single experiment and thereby discovering rare clones. The TrueRepertoire™ service contains the client's antibody clone of interest within the library itself, eliminating the need to perform new gene synthesis and significantly reducing time and cost.

KEY FEATURES

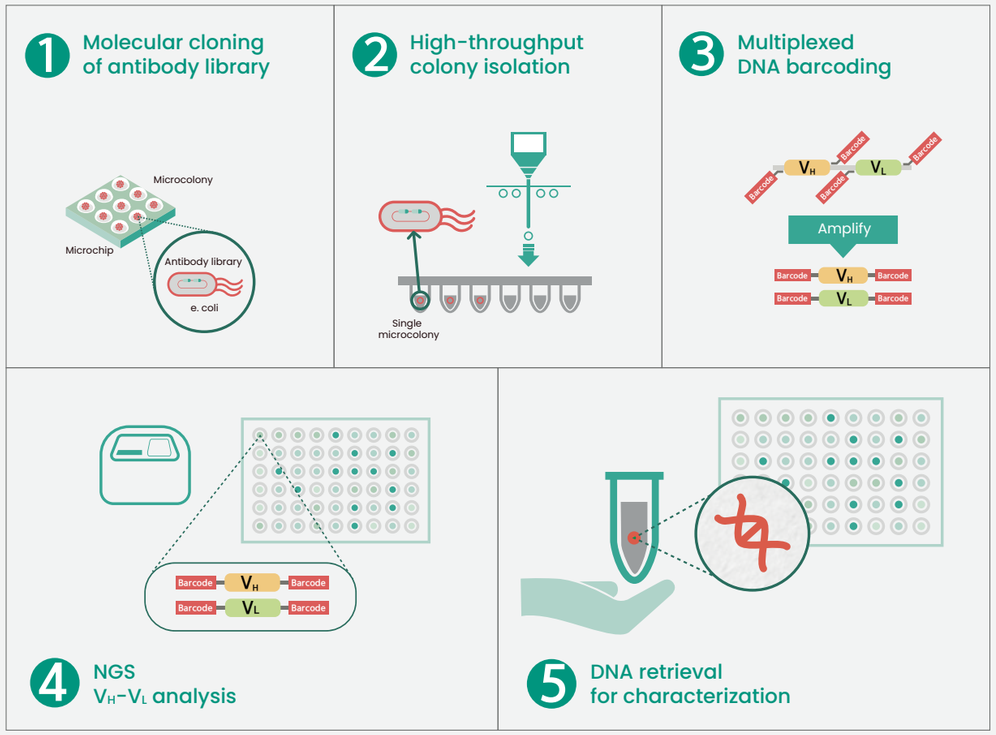
1. Provision of antibody DNA sequence library containing over 10,000 errorless strains	NGS-based sequence analysis and high-capacity clone separation and molecular barcode assays using Celemics proprietary MSSIC technology
2. V_H-V_L linkage analysis of each antibody	Receive V_H-V_L linkage information, an area difficult to analyze through NGS due to its short read length
3. Provision of physical property analysis of each antibody through bioinformatics analysis	Clone frequency distribution within the library V_H-V_L sequence length distribution, post-translation modification information, CDR and frame amino acid information, etc.
4. Retrieval of selected physical antibody allowing for convenient workflow	Eliminates the need to perform new gene synthesis and reduces time and cost due to the antibody clones within the library itself, enabling isolation of physical DNA for further characterization

REQUIREMENTS

Sample type*	Total RNA from B-Cell or/and T-Cell, DNA from B-Cell or/and T-Cell, DNA/RNA Amplicons
Concentration	100 ng/µl
Amount	1 µg
Turnaround time	Within 4-6 business weeks from sample collection**
Temperature	RT for storage and shipment

* ~30 bp of Consensus upstream & downstream sequence over V_H and V_L region required
** TAT depends on colony size

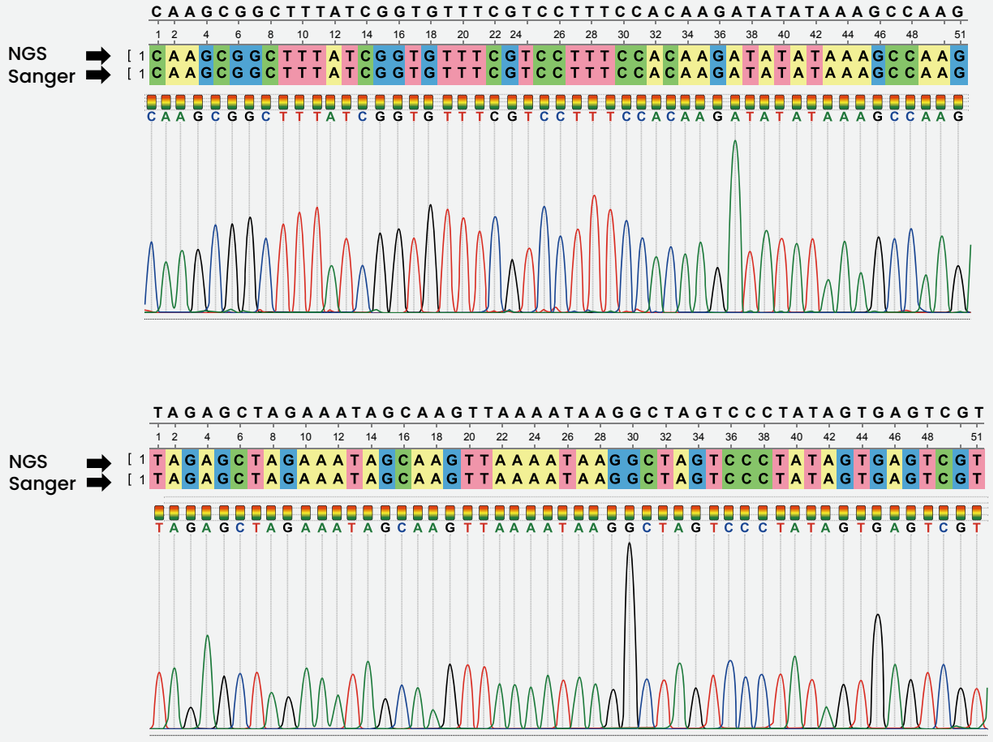
HOW TrueRepertoire™ WORKS



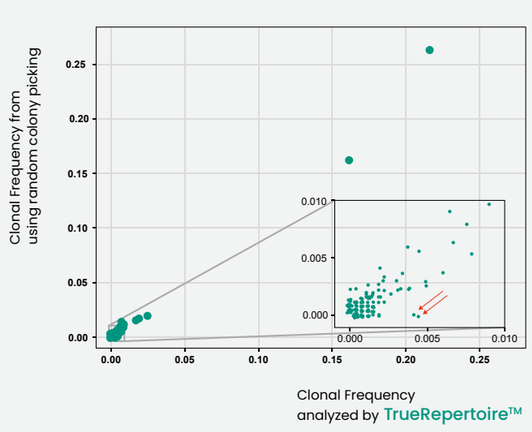
1. Celemics proprietary microcolony chip formation with high density, each colony starts from a single E. coli.
2. Extraction of the colonies from the microchip into microwell by Celemics' proprietary laser system
3. Multiplex PCR with barcoded primers from the isolated colonies
4. NGS and computation of the consensus sequences with cognate pairing of V_H and V_L
5. Clonal DNA retrieval based on the consensus sequence for further characterization

VALIDATION TESTS

Validation I. Result of 480 randomly selected antibody clones from TrueRepertoire™ perfectly matched (480/480) Sanger sequencing results of their physical DNA



Validation II. Similar clonotype frequencies of major clones between TrueRepertoire™ and random colony picking



1. Major clones showed similar clonotype frequency in both platforms - random colony picking followed by Sanger sequencing and TrueRepertoire™
2. The result showed that there were newly identified clones found only in the TrueRepertoire™ results (red arrows)

CELEMICS

Celemics Library Preparation Kit
Standard / EP

DESCRIPTION

Celemics Library Preparation Kit is optimized for high-efficiency Celemics panels. The Library Preparation Kits include End-repair, A-tailing enzyme mix, index primers (single or dual), adapters and buffers.

LIBRARY PREPARATION WORKFLOW FOR TARGET ENRICHMENT NGS

DNA Fragmentation		
Standard Fragmentation		EP Fragmentation
Option 1. Sonication	Option 2. Fragmentase	Fragmentase
Bead Purification & Quantification		
NGS Library Preparation		
ER/A	ER/A	ER/A
Adapter Ligation (Single/Dual Index)		
Bead Purification		
Index PCR		
Target Enrichment		

Celemics provides two methods for the library preparation step, Standard Library Preparation Kit and Enzymatic Preparation Kit (EP Kit). The Standard Library Preparation Kit includes all reagents for End repair (ER), A-tailing (A), and Adapter Ligation steps. For DNA fragmentation from Standard Library Preparation Kit, customers can use ultra-sonication devices or fragmentase. Fragmentase is provided by Celemics and included in the kit upon request. While the Standard Kit is composed of 4 different steps, the EP Kit includes all steps from enzymatic fragmentation to ER/A in a single reaction enabling convenient workflow. Since the purification step is not needed for EP Kit, the kit allows for minimal DNA loss which is a crucial factor for damaged DNA samples such as FFPE. EP Kit, provided by Celemics, includes all reagents required for library preparation.

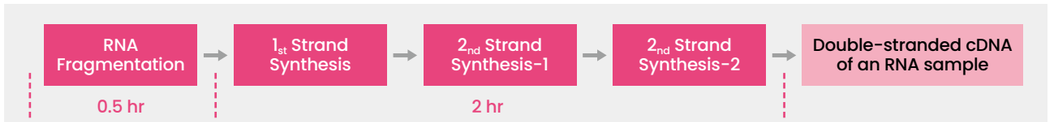
Note.
For Option 1, ultra sonicator is not provided with the kit.
For Option 2, the inclusion of the fragmentase in the kit is optional.

Celemics Double-Stranded cDNA Synthesis Kit

DESCRIPTION

Celemics Double-Stranded cDNA Synthesis Kit is optimized for NGS-based RNA sequencing. The kit includes all components from RNA fragmentation to double-stranded cDNA synthesis for NGS library preparation. The robust performance of the kit allows for the cDNA synthesis even from low amounts of RNA samples with high accuracy and reduced reaction time.

cDNA SYNTHESIS WORKFLOW



Sample amount : 10 ng to 1 µg *
Assay time : 30 minutes for RNA fragmentation and 2 hours for double-stranded cDNA synthesis
* Carrier RNA is required for sample amount < 25 ng

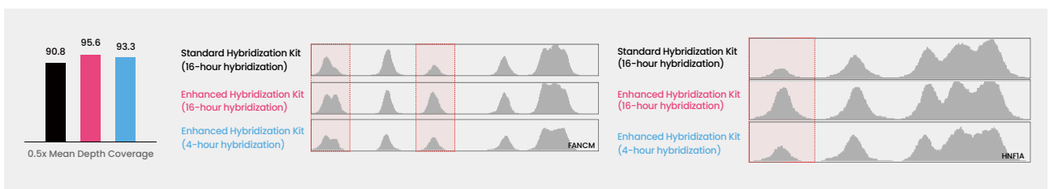
Celemics Hybridization Enhancer

DESCRIPTION

Celemics Hybridization Enhancer is developed for the hybridization step in the library preparation using Celemics Target Enrichment Kits (Enhanced Hybridization Kit). It enables 4 hours of hybridization with no compromise on the performance quality.

PERFORMANCE

Improved uniformity and coverage with Hybridization Enhancer



CeleMag™ Clean-up Bead

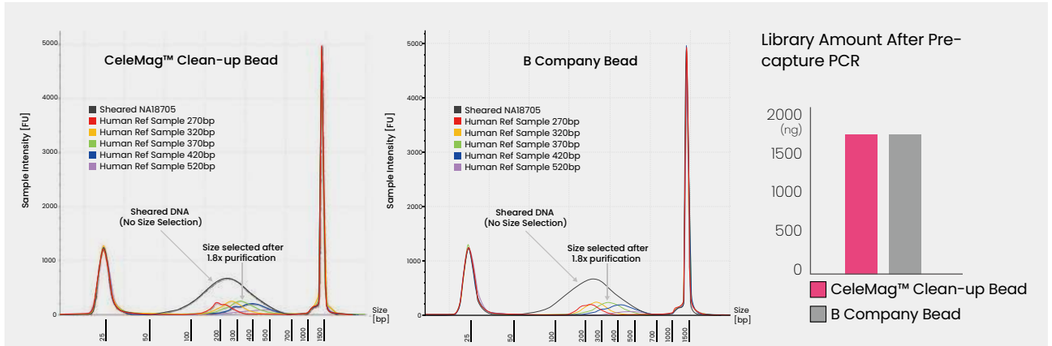
DESCRIPTION

The CeleMag™ Clean-up Bead utilizes unique magnetic bead-based chemistry enabling a simple, flexible and reproducible workflow for purification and size selection of nucleic acids.

KEY FEATURES

1. Market leading purification and size selection efficiency
2. Highly optimized with Celemics Target Enrichment Kits
3. Consistent size selection with flexibility

PERFORMANCE



CeleMag™ Clean-up Bead provides highly comparable performance to competitor product in size selection workflows, achieving consistent DNA size distributions and yielding desired library sizes.
CeleMag™ Clean-up Bead also provides equivalent NGS Library preparation recovery efficiency compared to competitor product.

CLM Polymerase

DESCRIPTION

The role of polymerase is critical in NGS process. Due to the complexity of the library, high performance polymerase is required for high uniformity and yield. As a service provider, Celemics has been providing CLM polymerase with market-leading performance, exhibiting high yield and accuracy with minimized PCR bias.
The product includes all reaction components for PCR. Contact us for more information.

CeleMag™ Streptavidin Bead

DESCRIPTION

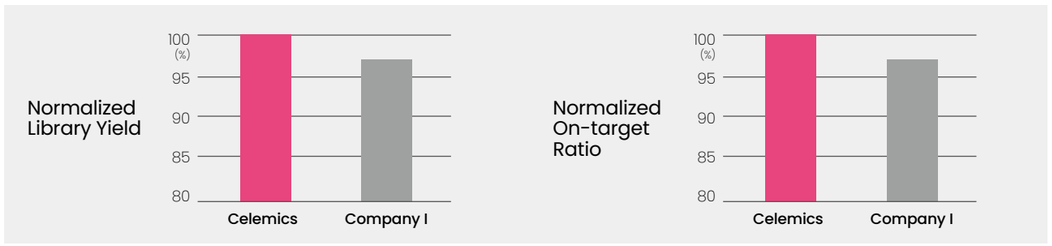
The CeleMag™ Streptavidin Bead selectively isolates biotinylated ligand, using binding properties of biotin. Its high performance enables isolating targeted genes that are bound to probes and minimizes DNA loss during the target enrichment process.

KEY FEATURES

1. High biotin-streptavidin binding capacity
2. Superior target enrichment efficiency

PERFORMANCE

Superior performance of CeleMag™ Streptavidin Bead compared to competitor product



Bioinformatics Software

DESCRIPTION

As a part of Celemics' intellectual property, a unique NGS bioinformatics pipeline is developed to process and analyze massive amounts of genomic data into a readable format with clinically significant biomarkers obtained through Next Generation Sequencing.

KEY FEATURES

1. Built-in service for all panel kits and services
2. Provides FASTQ to VCF and interpretation
3. Robust pipelines for detecting and analyzing all types of variants including SNV, Indel, CNV, Rearrangements, MSI, TMB, and ultra-low variants

NGS DATA ANALYSIS PIPELINE

EXAMPLES OF BIOINFORMATICS ANALYSIS REPORT

Comparison of IGV results from Celemics and competitor product
